# Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of "Caution," "Warning" or "Danger." They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)\*1), and other safety regulations.

1) ISO 4414: Pneumatic fluid power -- General rules relating to systems.

ISO 4413: Hydraulic fluid power -- General rules relating to systems.

IEC 60204-1: Safety of machinery -- Electrical equipment of machines .(Part 1: General requirements)

ISO 10218: Manipulating industrial robots -Safety.

```
etc.
```

Caution Marning Danger

**Caution** indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.

**Warning** indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.

**Danger** indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

# Warning

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.

Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results.

The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product.

This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

- 2. Only personnel with appropriate training should operate machinery and equipment. The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be
- performed by an operator who is appropriately trained and experienced. **3. Do not service or attempt to remove product and machinery/equipment until safety is confirmed.**1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
  - 2.When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
  - 3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.
- 4. Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.
  - 1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
  - 2. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalog.
  - 3. An application which could have negative effects on people, property, or animals requiring special safety analysis.
  - 4.Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.

# **Safety Instructions**

# **Caution**

#### The product is provided for use in manufacturing industries.

The product herein described is basically provided for peaceful use in manufacturing industries.

If considering using the product in other industries, consult SMC beforehand and exchange specifications or a contract if necessary.

If anything is unclear, contact your nearest sales branch.

### Limited warranty and Disclaimer/Compliance Requirements

The product used is subject to the following "Limited warranty and Disclaimer" and "Compliance Requirements".

Read and accept them before using the product.

#### Limited warranty and Disclaimer

1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first.\*2)

Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.

- 2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided. This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
- 3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products.
  - \*2) Vacuum pads are excluded from this 1 year warranty.
    - A vacuum pad is a consumable part, so it is warranted for a year after it is delivered. Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

#### Compliance Requirements

- 1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction(WMD) or any other weapon is strictly prohibited.
- 2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulation of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

## ▲ Caution

**SMC products are not intended for use as instruments for legal metrology.** Measurement instruments that SMC manufactures or sells have not been qualified by type approval tests relevant to the metrology (measurement) laws of each country.

Therefore, SMC products cannot be used for business or certification ordained by the metrology (measurement) laws of each country.

#### **Introduction**

IRV10,10A,20,20A vacuum regulator is an apparatus to adjust vacuum pressure (negative pressure) Arbitrarily by connecting vacuum pump to the port on the VAC. side.

#### 1.Specifications

	Model	IRV10*	IRV20*	
Fluid		Air		
Set pressure range Note1)		-100 to -1.3kPa		
Withstand pressure Note2)		100 kPa(Except with pressure gauge)		
Knob resolution		0.13kPa or less		
Atmospheric intake consumption Note3)		0.6L/min(ANR) or less		
Ambient and fluid temperature		5 to 60°C		
VAC side tubing O.D		φ6、φ8	φ6、φ8、φ10	
SET side tubing O.D		φ1/4"、φ5/16"	φ1/4"、φ5/16"、φ3/8"	
Weight	Standard connections	135g(IRV10-C08)	250g(IRV20-C10)	
(No accessories)	Single sided connections	125g(IRV10A-C08)	250g(IRV20A-C10)	

(Note1) This varies with pressure on vacuum pump side.

- (Note2) For vacuum regulators with a pressure gauge, the pressure gauge will be damaged if positive pressure is supplied. In the event that positive pressure is applied, the vacuum regulator will not be damaged, however, the main valve will open and positive pressure will enter the vacuum pump. This may cause malfunction of the vacuum pump. The vacuum regulator cannot positive pressure.
- (Note3) Taking air from atmosphere all the time.

## **SMC**

#### 2 .Construction and Operating Principle

By turning handle<sup>①</sup> clockwise, force of set spring<sup>②</sup> pushes down diaphragm<sup>③</sup> and main valve<sup>④</sup> so that VAC. Pressure side and SET. Pressure side are connected, which increases vacuum on SET. Pressure side (become closer to absolute vacuum).

Vacuum pressure on SET. Pressure side passes air pass, goes to vacuum chamber<sup>®</sup> and acts on the top of diaphragm<sup>®</sup>. This pressure opposes compression force of set spring<sup>®</sup> and becomes SET. Pressure.

When vacuum SET. Pressure becomes higher than the set value (closer to absolute vacuum), balance of set spring<sup>®</sup> and SET. Pressure in vacuum chamber<sup>®</sup> is lost. Because of this, diaphragm<sup>®</sup> is pushed up so that main valve<sup>®</sup> closes and atmosphere suction valve<sup>®</sup> opens. Atmosphere flows in SET. Pressure and becomes SET. Pressure when compression force of set Spring<sup>®</sup> balances with SET. Pressure.

When vacuum of SET. Pressure becomes lower than the set value (closer to atmospheric pressure), balance of set spring<sup>®</sup> and SET. Pressure in vacuum chamber<sup>®</sup> is lost, and diaphragm<sup>®</sup> is pushed down. Atmosphere suction valve<sup>®</sup> closes and main valve<sup>®</sup> opens, and air is sucked to VAC. Pressure side. It becomes SET. Pressure when compression force of set spring<sup>®</sup> balances with SET. Pressure.

3 .How to Order

#### 4 .Specific Product Precautions

**SMC** 

#### How to pull out the clip

Set the driver tip to the slope of the place where the clip inserted, lift the clip by moving the driver slowly.

Mounting of fitting assembly

#### Environment (1)Do not use the product in an environment where the product is directly exposed to corrosive gases, chemicals, salt water or steam. (2)Do not mount the product in a location where it is subject to strong vibrations and/or shocks. (3)Use this vacuum regulator in a location free from dirt since this product sucks atmosphere all the time. (4)When the product is directly exposed to sunlight, provide a protective cover. (5)When heat source is around the product, shut off radiant heat. **Caution** Vacuum Source (1) This vacuum regulator does not control pressure by connecting with the exhaust side of the vacuum pump. (2)Note that ejector should not be used as "vacuum source" since its flow rate is less than this vacuum regulator. Caution Air (1) Contact SMC when using the product in applications other than Compressed air. (2) Do not use air containing chemicals, synthetic oils with organic solvents, Salinity and corrosive gases. Caution Operation (1) Connect vacuum pump to the port indicated by "VAC" (shown in upper Right of the port). (2) Pressure changes "atmospheric pressure $\rightarrow$ vacuum pressure" by turning the handle clockwise and "vacuum pressure→atmospheric pressure" by turning the handle counterclockwise. (3)Pressure cannot be controlled if the air intake hole (hole on the side of the body) is blocked. Do not block the air intake hole by hand or with an object during pressure adjustment. (4)To lock the handle after pressure setting, push the handle until orange Mark below is hidden and it clicks. To unlock the handle, pull the handle Until the orange make is seen and it clicks. (5)Maximum settable vacuum pressure is affected by the atmospheric pressure where the vacuum regulator is used. Atmospheric pressure varies depending on the altitude and weather. Actual maximum settable vacuum pressure may not reach the value in the specification. (6)When vacuum pump capacity is relatively small or piping ID is small, large fluctuation of set pressure (variation range in pressure when flowing from zero) may be the result. In this case, change the vacuum pump or piping - 12 -

diameter. If the vacuum pump may not be replaced, add a tank (capacity of the tank depends on the operating conditions) on VAC side.

- (7)Note that pressure response time after valve (solenoid valve) opening/ closing is affected by internal volume of the setting side (including piping volume). In addition, capacity of vacuum pump affects the response time.
- (8)As the vacuum regulator intakes atmospheric pressure all the time, the vacuum pressure cannot be maintained if the vacuum pump or valve is stopped. If vacuum pressure needs to be retained, it is necessary to continuously run the
- vacuum pump. (9)The set pressure may vary depending on the elapsed time and change in ambient temperature after pressure setting. If the setting value varies, adjust with the handle.
- (10)If the directional control valve (solenoid valve, mechanical valve etc.) is mounted and switched ON-OFF repeatedly for a long time, the set pressure may vary. If the setting value varies, adjust with the handle.
- (11) If there is a possibility that the vacuum regulator takes in the dust and water droplets in the ambient environment through the SET port of the vacuum regulator, install a vacuum filter or a vacuum drain separator to avoid the entry of these.
- (12)There may be pulsation or noise depending on the pressure conditions, piping conditions and ambient environment. In this case, it is possible to improve the problem by changing the pressure conditions and piping conditions. If the problem is not improved, contact your SMC sales representative.
- (13) If pressure gauge is used in the direction as Figure 1, it may cause displacement from zero point. Therefore, be sure to use pressure gauge in the Direction as Figure 2

#### 5.Warranty

- Period: 1.5 year after delivery to the customer's specified location or one year after starting operation, whichever comes sooner.
- 2. Scope: If a failure occurs within the warranty period which is deemed to be SMC's responsibility, we will provide a replacement product as limited warranty. Any loss or damage incurred by the failure is not covered by the warranty."

#### 3. Contents:

- a. We guarantee that the product will operate normally if it is installed under maintenance and control in accordance with the Operation Manual, and operated under the conditions specified in the catalog or contracted separately.
- b. We guarantee that the product does not have any defects in components, materials or assembly.
- c. We guarantee that the product complies with the outline dimensions provided.
- d. The following situations are out of scope of this warranty.
  - 1) The product was incorrectly installed or connected with other equipment.
  - The product was under insufficient maintenance and control or incorrectly handled.
  - 3) The product was operated outside of the specifications.
  - 4) The product was modified or altered in construction.
  - 5) The failure was a secondary failure of the product caused by the failure of equipment connected to the product.
  - 6) The failure was caused by a natural disaster such as an earthquake, typhoon, or flood, or by an accident or fire.
- 4. If there is any doubt about anything specified in "Scope" and "Content", it shall be resolved by agreement between the customer and SMC.
