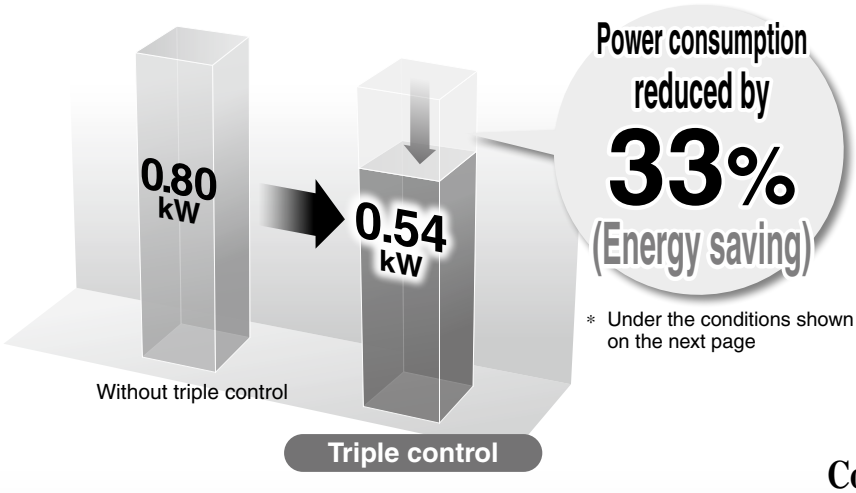
HRSE Series

Basic Type

(Only 230 VAC type)

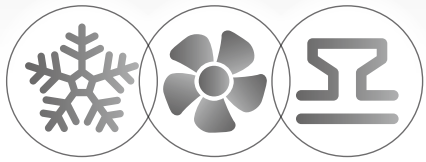
RoHS

Efficient energy saving due to the triple control!



Power consumption reduced by **33%** (Energy saving)

* Under the conditions shown on the next page



- Triple control
- Compressor ON/OFF
- Air-cooled condenser fan
- Electronic valve control

Compact/Lightweight 32 kg (100 VAC)

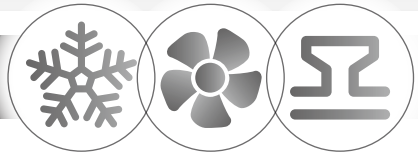
- **Cooling capacity** 1.2, 1.6, 2.2 kW
- **Max. ambient temperature** 40°C (200 VAC)
- **Set temperature range** 10 to 30°C
- **Temperature stability** ±2.0°C
- **Maintenance-free** Magnet pump
- **Low-noise design** 55 dB (A)
- **Power supply** 100/200 VAC 50/60 Hz
  230 VAC 50/60 Hz

Simple function and performance

Cooling capacity	1.2, 1.6, 2.2 kW (60 Hz)

Power supply	100/200 VAC (50/60 Hz) 230 VAC (50/60 Hz)

Triple control



Triple control

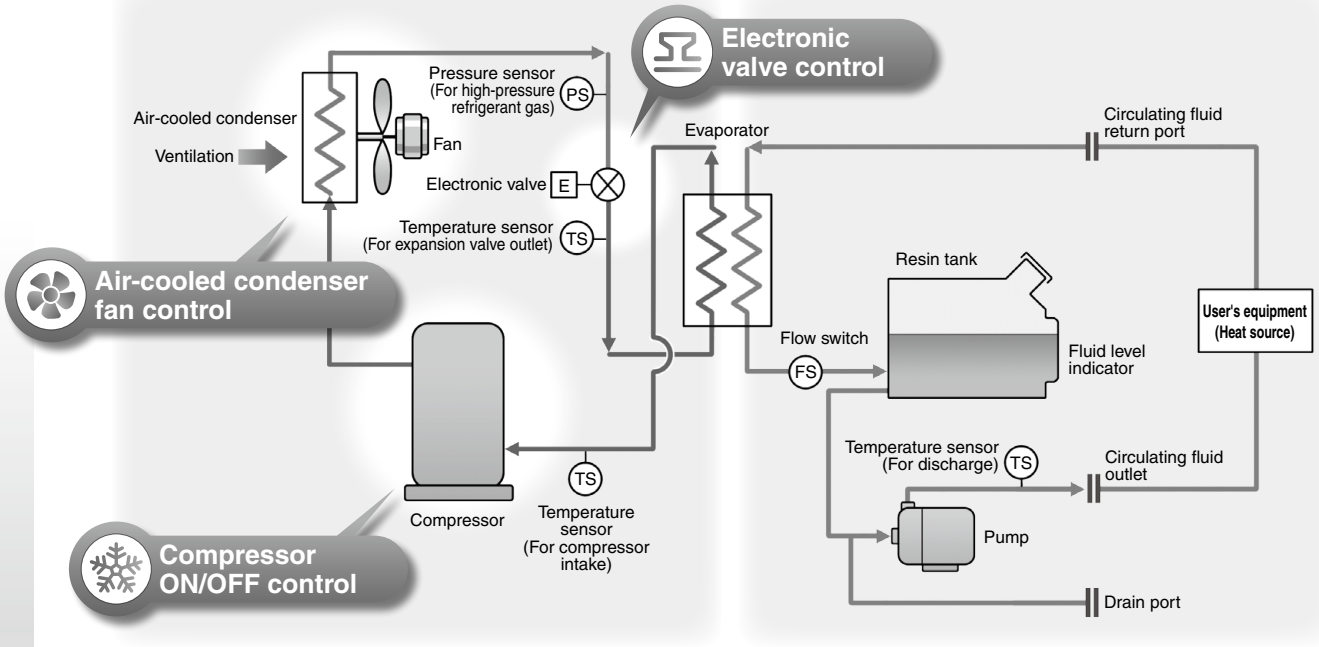
Compressor, fan and electronic control valve can be controlled depending on the heat load from the user's equipment.

Power consumption reduced by 33%

Conditions: ● 100 VAC ● Frequency: 60 Hz ● Circulating fluid temperature in the rated operation: 20°C ● Ambient temperature: 25°C ● Load: 1200 W ● Flow rate: 7 L/min

Circuit diagram

∗ This circuit construction of the position of the parts may be different from actual product.



Refrigeration circuit

- The compressor compresses the refrigerant gas and discharges high-temperature, high-pressure refrigerant gas.
- The high-temperature, high-pressure refrigerant gas is cooled down by fan ventilation in the air-cooled condenser, where it is then liquefied.
- The liquefied high-pressure refrigerant gas expands and its temperature lowers when it passes through the electronic valve, where it vaporizes after receiving heat from the circulating fluid in the evaporator.
- The vaporized refrigerant gas is sucked into the compressor and compressed again.

Point Refrigeration circuit control system requires the minimum basic essential function.

According to the amount of heat generated from user's equipment, the system turns power ON/OFF to the compressor and controls the electronic valve. By combining the above function, the system also controls the number of rotations of the fan that is appropriate to the amount of heat and ambient temperature, to provide the performance of temperature control of ±2°C.

Circulating fluid circuit

- After the circulating fluid discharged from the pump is heated by the user's equipment, it returns to the tank.
- The circulating fluid is sent to the evaporator by the pump, and is controlled to remain at a set temperature by the refrigeration circuit. It will then be discharged to the user's equipment side again by the thermo-chiller.

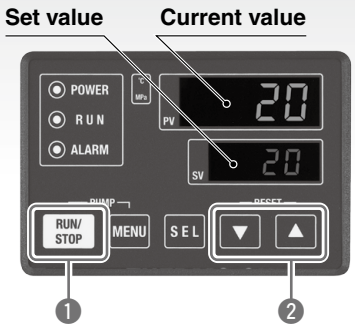
Point Temperature control system requires the minimum basic essential function.

Signal of temperature sensor for pump discharging controls the refrigeration circuit. Circulating fluid is heated by the pump heat and the amount of heat generated from user's equipment.

Thermo-chiller of the basic type

(Only 230 VAC type)

Simple operation



Step 1
Press the RUN/STOP key.

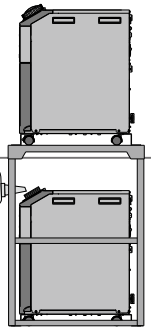
Step 2
Adjust the temperature setting with the ▼ / ▲ keys.

Immediate usage after fitting plug to power supply

Power cable with plug
(For 100 VAC)

For 200/230 VAC

Shaped for easy supply of circulating fluid



Easy to supply circulating fluid even the product is installed under a laboratory work bench or two products are stacked.

Easy to check the circulating fluid level

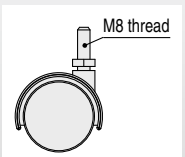
Easy to check the circulating fluid level at a glance!

No tools are required to mount/ remove the front panel.

Easy to mount/ remove due to magnetic construction

Easy to remove dust, cutting chips, etc., stuck to the dustproof net with a brush or air blow

With casters (Removable)



Option

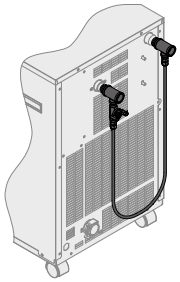
High-pressure pump mounted

For large piping resistance

Optional Accessories

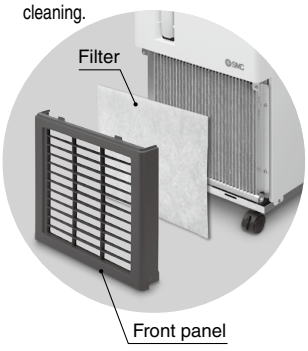
Bypass piping set

When the circulating fluid goes below the rated flow (7 L/min), cooling capacity will be reduced or the temperature stability will be badly affected. In such a case, use the bypass piping set.



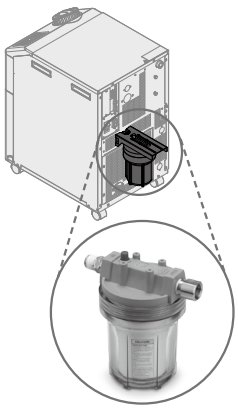
Replacement type dustproof filter set

Suitable for use in excessively dusty atmospheres
The disposable type filter reduces the time and effort required for cleaning.



Particle filter set

Removes foreign matter in the circulating fluid



Anti-quake bracket

Measures against earthquake.
It can be fixed to the floor or base.

Application Examples

Global Supply Network

SMC has a comprehensive network in the global market.

We now have a presence of more than 560 branch offices and distributors in 83 countries and regions worldwide, such as Asia, Oceania, North/Central/South America, and Europe. With this global network, we are able to provide a global supply of our substantial range of products and high-quality customer service. We also provide full support to local factories, foreign manufacturing companies, and Japanese companies in each country.

SMC Thermo-chiller Variations

Lots of variations are available according to the users' requirements.

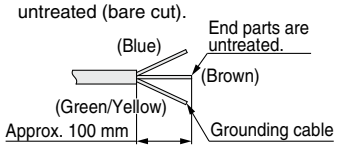
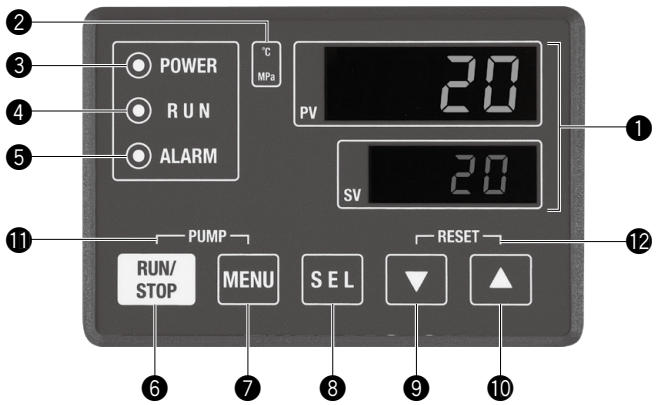
*1 Power supply cable terminal
- For a power supply specification of 100 V (HRSE□□□-A-10), a plug with ground terminal (JIS C 8303 Plug for the receptacle with dipoles grounding electrode) is included.
- For a power supply specification of 200/230 V (HRSE□□□-A-20/23), the end parts of all three lead wires are untreated (bare cut).



HRSE012/018/024-A-10/20/23-T (High-pressure pump mounted)

● Operation Display Panel



No.	Description	Function	
❶	Digital display (7 segment, 4 digits)	PV	Displays the current circulating fluid temperature, pressure, alarm codes and other menu items (codes).
		SV	Displays the set values of the circulating fluid discharge temperature and other menus.
❷	[°C] [MPa] lamp	[°C] lamp is turned on when temperature is displayed on the digital display. [MPa] lamp is turned on when pressure is displayed on the digital display.	
❸	[POWER] lamp	Lights up when the power is being supplied to the unit.	
❹	[RUN] lamp	Lights up during operation, and goes off when it is stopped. Flashes during stand-by for stop or independent operation of the pump.	
❺	[ALARM] lamp	Flashes with buzzer when alarm occurs.	
❻	[RUN/STOP] key	Makes the product run or stop.	
❼	[MENU] key	Shifts the main menu (display screen of circulating fluid discharge temperature and pressure, etc.) and other menus (for monitoring and entry of set values).	
❽	[SEL] key	Changes the item in menu and enters the set value.	
❾	[▼] key	Decreases the set value.	
❿	[▲] key	Increases the set value.	
⓫	[PUMP] key	Press the [MENU] and [RUN/STOP] keys simultaneously. The pump starts running independently to make the product ready for start-up (release the air).	
⓬	[RESET] key	Press the [▼] and [▲] keys simultaneously. The alarm buzzer is stopped and the [ALARM] lamp is reset.	

● Alarm

Code	Alarm message	Operation status
AL02	High circulating fluid discharge temp.	Stop
AL03	Circulating fluid discharge temp. rise	Continue*1
AL04	Circulating fluid discharge temp. drop	Continue*1
AL07	Abnormal pump operation	Stop
AL15	Refrigerant circuit pressure (high pressure side) drop	Stop
AL20	Memory error	Stop
AL22	Circulating fluid discharge temp. sensor failure	Stop
AL24	Compressor intake temp. sensor failure	Stop
AL26	Compressor discharge pressure sensor failure	Stop
AL27	Heat exchanger inlet temp. sensor failure	Stop
AL28	Pump maintenance	Continue
AL29	Fan motor maintenance	Continue
AL30	Compressor maintenance	Continue

*1 "Stop" or "Continue" are default settings. Users can change them to "Continue" and "Stop." For details, read the Operation Manual.

HRSE Series
Option/Optional Accessories

Option

* Options have to be selected when ordering the thermo-chiller. It is not possible to add them after purchasing the unit.

T Option symbol

High-Pressure Pump Mounted

HRSE□-A-□-T

High-pressure pump mounted

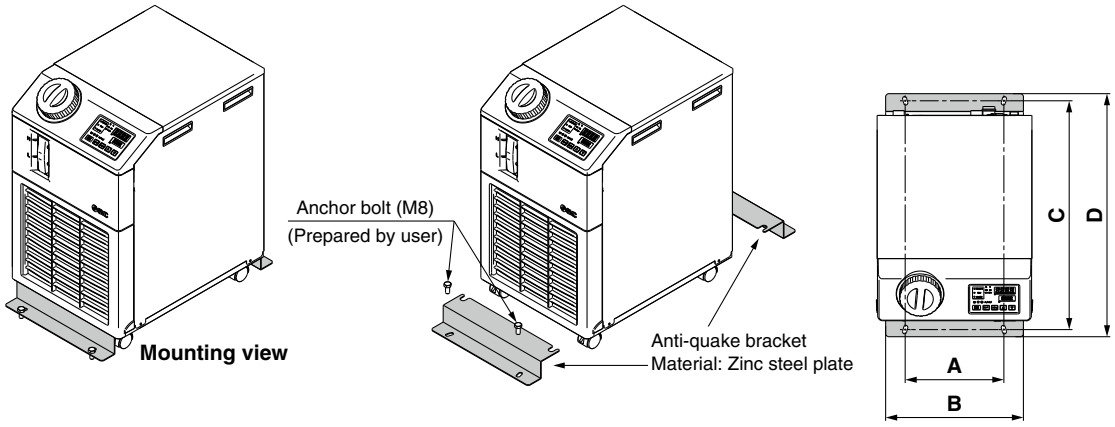
Possible to choose a high-pressure pump in accordance with user's piping resistance.
Cooling capacity will decrease by heat generated in the pump.

Optional Accessories

① Anti-quake Bracket

Bracket for earthquakes. Anchor bolt (M8) suitable for the flooring material should be prepared separately by user.
(Anti-quake bracket thickness: 1.6 mm)

Part no. (per unit)	Applicable model	A	B	C	D
HRS-TK003	HRSE012-A-□ HRSE018-A-□ HRSE024-A-□	240	(335)	505	(540)
	HRSE012-A-□-T HRSE018-A-□-T HRSE024-A-□-T	240	(335)	555	(590)



Mounting view

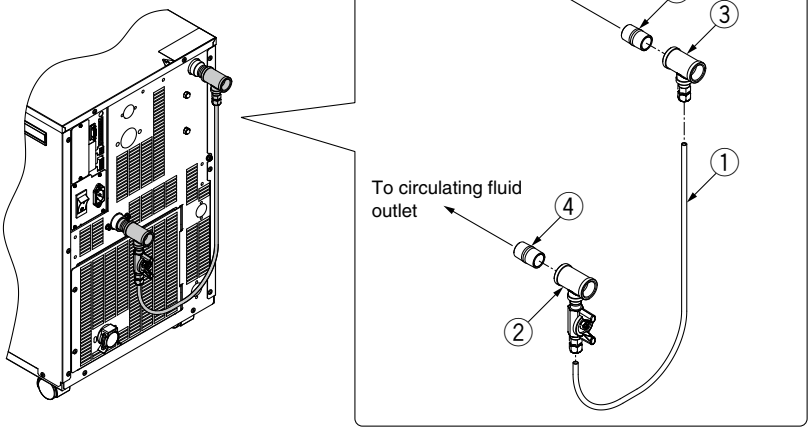
② Bypass Piping Set

When the circulating fluid goes below the rated flow (7 L/min), cooling capacity will be reduced and the temperature stability will be badly affected. In such a case, use the bypass piping set.
A high-pressure pump is also available.

Part no.	Applicable model
HRS-BP001	HRSE012-A-□(-T) HRSE018-A-□(-T) HRSE024-A-□(-T)

Parts List

No.	Description
①	Bypass tube (700 mm) (Part no.: TL0806)
②	Outlet piping (With ball valve)
③	Return port piping
④	Nipple (Size: 1/2) (2 pcs.)

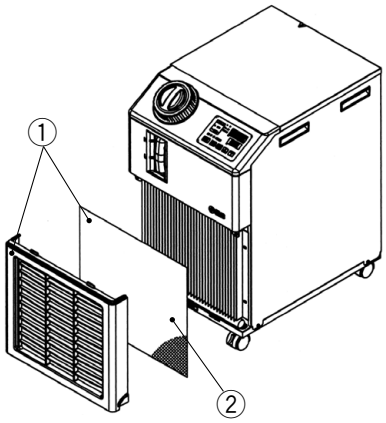


Optional Accessories

③ Replacement Type Dustproof Filter Set

A disposable dustproof filter is mounted instead of the dustproof net on the front panel.

Part no.	Applicable model
HRS-FL001	HRSE□-A-□-(T)



Parts List

No.	Description	Part no.	Note
①	Replacement type dustproof filter set	HRS-FL001	Front panel with hook-and-loop fastener for holding filter 5 filters are included. (No dustproof net is included.)
②	Replacement type dustproof filter	HRS-FL002	5 filters per set Size: 300 x 370

④ Particle Filter Set

Removes foreign matter in the circulating fluid.

HRS−PF001−W075−H

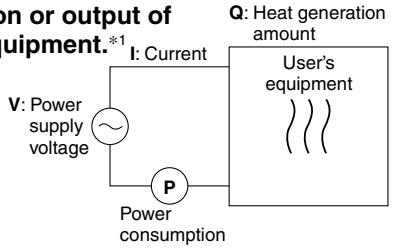
HRSE Series
Cooling Capacity Calculation

Required Cooling Capacity Calculation

Example 1: When the heat generation amount in the user's equipment is known.

The heat generation amount can be determined based on the power consumption or output of the heat generating area — i.e. the area requiring cooling — within the user's equipment.∗1



① **Derive the heat generation amount from the power consumption.**

Power consumption **P**: 1000 [W]

Q = P = 1000 [W]

Cooling capacity = Considering a safety factor of 20%,

1000 [W] x 1.2 = 1200 [W]

② **Derive the heat generation amount from the power supply output.**

Power supply output **VI**: 1.0 [kVA]

Q = P = V x I x Power factor

In this example, using a power factor of 0.85:

= 1.0 [kVA] x 0.85 = 0.85 [kW] = 850 [W]

Cooling capacity = Considering a safety factor of 20%,

850 [W] x 1.2 = 1020 [W]

③ **Derive the heat generation amount from the output.**

Output (shaft power, etc.) **W**: 800 [W]

$$\mathbf{Q = P = \frac{W}{Efficiency}}$$

In this example, using an efficiency of 0.7:

$$\mathbf{= \frac{800}{0.7} = 1143\ [W]}$$

Cooling capacity = Considering a safety factor of 20%,

1143 [W] x 1.2 = 1372 [W]

∗1 The examples above calculate the heat generation amount based on the power consumption. The actual heat generation amount may differ due to the structure of the user's equipment. Be sure to check it carefully.

Example 2: When the heat generation amount in the user's equipment is not known.

Obtain the temperature difference between inlet and outlet by circulating the circulating fluid inside the user's equipment.

Heat generation amount by user's equipment **Q**	: Unknown [W] ([J/s])
Circulating fluid	: Tap water∗1
Circulating fluid mass flow rate $\mathbf{q_m}$	: (= ρ x $\mathbf{q_v}$ ÷ 60) [kg/s]
Circulating fluid density ρ	: 1 [kg/dm^3]
Circulating fluid (volume) flow rate $\mathbf{q_v}$	: 10 [dm^3/min]
Circulating fluid specific heat **C**	: 4.2 x 10^3 [J/(kg·K)]
Circulating fluid outlet temperature $\mathbf{T_1}$	: 293 [K] (20 [°C])
Circulating fluid return temperature $\mathbf{T_2}$	: 295 [K] (22 [°C])
Circulating fluid temperature difference **ΔT**	: 2.0 [K] (= $\mathbf{T_2 - T_1}$)
Conversion factor: minutes to seconds (SI units)	: 60 [s/min]

∗1 Refer to page 277 for the typical physical property value of tap water or other circulating fluids.

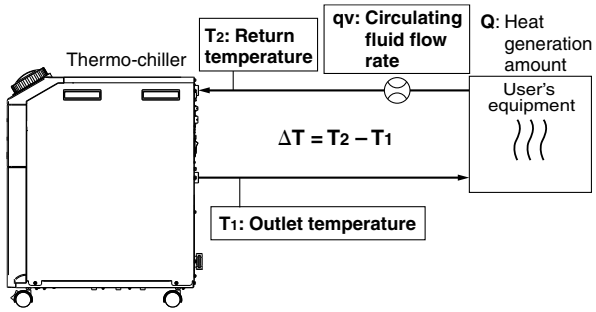
$$\mathbf{Q = q_m \times C \times (T_2 - T_1)}$$

$$\mathbf{= \frac{\rho \times q_v \times C \times \Delta T}{60} = \frac{1 \times 10 \times 4.2 \times 10^3 \times 2.0}{60}}$$

$$\mathbf{= 1400\ [J/s] \approx 1400\ [W]}$$

Cooling capacity = Considering a safety factor of 20%,

1400 [W] x 1.2 = 1680 [W]



Example of conventional units (Reference)

Heat generation amount by user's equipment **Q**	: Unknown [cal/h] → [W]
Circulating fluid	: Tap water∗1
Circulating fluid weight flow rate $\mathbf{q_m}$	: (= ρ x $\mathbf{q_v}$ x 60) [kgf/h]
Circulating fluid weight volume ratio γ	: 1 [kgf/L]
Circulating fluid (volume) flow rate $\mathbf{q_v}$	: 10 [L/min]
Circulating fluid specific heat **C**	: 1.0 x 10^3 [cal/(kgf·°C)]
Circulating fluid outlet temperature $\mathbf{T_1}$	: 20 [°C]
Circulating fluid return temperature $\mathbf{T_2}$	: 22 [°C]
Circulating fluid temperature difference **ΔT**	: 2.0 [°C] (= $\mathbf{T_2 - T_1}$)
Conversion factor: hours to minutes	: 60 [min/h]
Conversion factor: kcal/h to kW	: 860 [(cal/h)/W]

$$\mathbf{Q = \frac{q_m \times C \times (T_2 - T_1)}{860}}$$

$$\mathbf{= \frac{\gamma \times q_v \times 60 \times C \times \Delta T}{860}}$$

$$\mathbf{= \frac{1 \times 10 \times 60 \times 1.0 \times 10^3 \times 2.0}{860}}$$

$$\mathbf{= \frac{1200000\ [cal/h]}{860}}$$

$$\mathbf{\approx 1400\ [W]}$$

Cooling capacity = Considering a safety factor of 20%,

1400 [W] x 1.2 = 1680 [W]

Required Cooling Capacity Calculation

Example 3: When there is no heat generation, and when cooling the object below a certain temperature and period of time.

Heat quantity by cooled substance (per unit time) **Q**: Unknown [W] ([J/s])
Cooled substance : Water
Cooled substance mass **m** : (= ρ x **V**) [kg]
Cooled substance density ρ : 1 [kg/L]
Cooled substance total volume **V** : 20 [dm^3]
Cooled substance specific heat **C** : 4.2 x 10^3 [J/(kg·K)]
Cooled substance temperature when cooling begins T_0 : 305 [K] (32 [°C])
Cooled substance temperature after t hour T_t : 293 [K] (20 [°C])
Cooling temperature difference ΔT : 12 [K] (= $T_0 - T_t$)
Cooling time Δt : 900 [s] (= 15 [min])

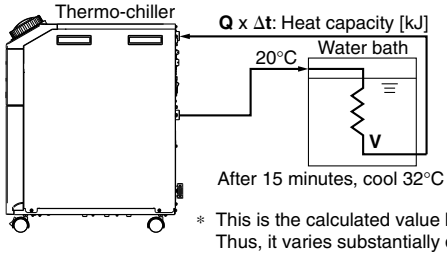
∗ Refer to the following for the typical physical property values by circulating fluid.

$$Q = \frac{m \times C \times (T_0 - T_t)}{\Delta t} = \frac{\rho \times V \times C \times \Delta T}{\Delta t}$$

$$= \frac{1 \times 20 \times 4.2 \times 10^3 \times 12}{900} = 1120 \text{ [J/s]} \approx 1120 \text{ [W]}$$

Cooling capacity = Considering a safety factor of 20%,

1120 [W] x 1.2 = 1344 [W]



After 15 minutes, cool 32°C down to 20°C.

∗ This is the calculated value by changing the fluid temperature only.
Thus, it varies substantially depending on the water bath or piping shape.

Example of conventional units (Reference)

Heat quantity by cooled substance (per unit time) **Q**: Unknown [cal/h] → [W]
Cooled substance : Water
Cooled substance weight **m** : (= ρ x **V**) [kgf]
Cooled substance weight volume ratio γ : 1 [kgf/L]
Cooled substance total volume **V** : 20 [L]
Cooled substance specific heat **C** : 1.0 x 10^3 [cal/(kgf·°C)]
Cooled substance temperature when cooling begins T_0 : 32 [°C]
Cooled substance temperature after t hour T_t : 20 [°C]
Cooling temperature difference ΔT : 12 [°C] (= $T_0 - T_t$)
Cooling time Δt : 15 [min]
Conversion factor: hours to minutes : 60 [min/h]
Conversion factor: kcal/h to kW : 860 [(cal/h)/W]

$$Q = \frac{m \times C \times (T_0 - T_t)}{\Delta t \times 860} = \frac{\gamma \times V \times 60 \times C \times \Delta T}{\Delta t \times 860}$$

$$= \frac{1 \times 20 \times 60 \times 1.0 \times 10^3 \times 12}{15 \times 860}$$

$$\approx 1120 \text{ [W]}$$

Cooling capacity = Considering a safety factor of 20%,

1120 [W] x 1.2 = 1344 [W]

Precautions on Cooling Capacity Calculation

1. Heating capacity

When the circulating fluid temperature is set above room temperature, it needs to be heated by the thermo-chiller. The heating capacity depends on the circulating fluid temperature. Consider the radiation rate and heat capacity of the user's equipment and check beforehand if the required heating capacity is provided.

2. Pump capacity

<Circulating fluid flow rate>

Circulating fluid flow rate varies depending on the circulating fluid discharge pressure. Consider the installation height difference between the thermo-chiller and the user's equipment, and the piping resistance such as circulating fluid pipings, or piping size, or piping curves in the machine. Check beforehand if the required flow is achieved, using the pump capacity curves.

<Circulating fluid discharge pressure>

Circulating fluid discharge pressure has the possibility to increase up to the maximum pressure in the pump capacity curves. Check beforehand if the circulating fluid pipings or circulating fluid circuit of the user's equipment are fully durable against this pressure.

Circulating Fluid Typical Physical Property Values

1. This catalog uses the following values for density and specific heat in calculating the required cooling capacity.

Density ρ: 1 [kg/L] (or, using conventional units, weight volume ratio γ = 1 [kgf/L])
Specific heat **C**: 4.19 x 10^3 [J/(kg·K)] (or, using conventional units, 1 x 10^3 [cal/(kgf·°C)])

2. Values for density and specific heat change slightly according to temperature shown below. Use this as a reference.

Water

Physical property value / Temperature	Density ρ [kg/L]	Specific heat C [J/(kg·K)]	Conventional units	
			Weight volume ratio γ [kgf/L]	Specific heat C [cal/(kgf·°C)]
5°C	1.00	4.2 x 10^3	1.00	1 x 10^3
10°C	1.00	4.19 x 10^3	1.00	1 x 10^3
15°C	1.00	4.19 x 10^3	1.00	1 x 10^3
20°C	1.00	4.18 x 10^3	1.00	1 x 10^3
25°C	1.00	4.18 x 10^3	1.00	1 x 10^3
30°C	1.00	4.18 x 10^3	1.00	1 x 10^3
35°C	0.99	4.18 x 10^3	0.99	1 x 10^3
40°C	0.99	4.18 x 10^3	0.99	1 x 10^3

15% Ethylene Glycol Aqueous Solution

Physical property value / Temperature	Density ρ [kg/L]	Specific heat C [J/(kg·K)]	Conventional units	
			Weight volume ratio γ [kgf/L]	Specific heat C [cal/(kgf·°C)]
5°C	1.02	3.91 x 10^3	1.02	0.93 x 10^3
10°C	1.02	3.91 x 10^3	1.02	0.93 x 10^3
15°C	1.02	3.91 x 10^3	1.02	0.93 x 10^3
20°C	1.01	3.91 x 10^3	1.01	0.93 x 10^3
25°C	1.01	3.91 x 10^3	1.01	0.93 x 10^3
30°C	1.01	3.91 x 10^3	1.01	0.94 x 10^3
35°C	1.01	3.91 x 10^3	1.01	0.94 x 10^3
40°C	1.01	3.92 x 10^3	1.01	0.94 x 10^3

∗ Shown above are reference values. Contact circulating fluid supplier for details.

HRSE Series
Specific Product Precautions 1

Be sure to read this before handling the products. Refer to page 513 for safety instructions and pages 514 to 517 for temperature control equipment precautions.

Design

⚠ Warning

1. This catalog shows the specifications of a single unit.

1) Check the specifications of the single unit (contents of this catalog) and thoroughly consider the adaptability between the user's system and this unit.

2) Although a protection circuit as a single unit is installed, prepare a drain pan, water leakage sensor, discharge air facility, and emergency stop equipment, depending on the user's operating conditions. Also, the user is requested to carry out a safety design for the whole system.

2. When attempting to cool areas that are open to the atmosphere (tanks, pipes), plan your piping system accordingly.

When cooling open-air external tanks, arrange the piping so that there are coil pipes for cooling inside the tanks and to carry back the entire flow volume of circulating fluid that is released.

3. Use non-corrosive material for circulating fluid contact parts.

Using corrosive materials such as aluminum or iron for fluid contact parts such as piping may cause clogging or leakage in the circulating fluid circuit. Provide protection against corrosion when you use the product.

Selection

⚠ Warning

1. Model selection

When selecting a thermo-chiller model, the amount of heat generation from the user's equipment must be known. Obtain this value, referring to "Cooling Capacity Calculation" on pages 276 and 277 before selecting a model.

Handling

⚠ Warning

1. Thoroughly read the operation manual.

Read the operation manual completely before operation, and keep the manual where it can be referred to as necessary.

Transportation/Carriage/Movement

⚠ Warning

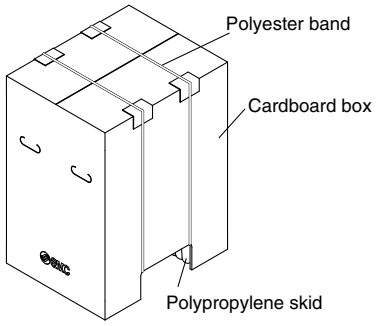
1. This product is heavy. Pay attention to safety and the position of the product when it is transported, carried, and moved.

2. Read the operation manual carefully before moving the product after unpacking.

⚠ Caution

1. Never put the product down on its side as this may cause failure.

The product will be delivered in the packaging shown below.



Model	Weight [kg]	Dimensions [mm]
HRSE012-A-10 **HRSE018-A-10**	35	Height 745 x Width 465 x Depth 575
HRSE012-A-10-T **HRSE018-A-10-T**	42	Height 745 x Width 465 x Depth 620
HRSE012-A-20 **HRSE018-A-20** **HRSE024-A-20**	38	Height 745 x Width 465 x Depth 575
HRSE012-A-20-T **HRSE018-A-20-T** **HRSE024-A-20-T**	45	Height 745 x Width 465 x Depth 620
HRSE012-A-23 **HRSE018-A-23** **HRSE024-A-23**	41	Height 790 x Width 470 x Depth 580
HRSE012-A-23-T **HRSE018-A-23-T** **HRSE024-A-23-T**	48	Height 790 x Width 470 x Depth 580

⚠ Caution

If this product is to be transported after delivery, please use the original packaging the product was delivered in. If other packaging is to be used, carefully package the product so as to prevent the product from incurring any damage during transport.

HRSE Series
Specific Product Precautions 2

Be sure to read this before handling the products. Refer to page 513 for safety instructions and pages 514 to 517 for temperature control equipment precautions.

Operating Environment/Storage Environment

⚠Warning

1. Do not use in the following environment as it will lead to a breakdown.

1) Outdoors
2) In locations where water, water vapor, salt water, and oil may splash on the product.
3) In locations where there are dust and particles.
4) In locations where corrosive gases, organic solvents, chemical fluids, or flammable gases are present. (This product is not explosion proof.)
5) In locations where the ambient temperature exceeds the limits as mentioned below.
   During transportation/storage: 0 to 50°C (But as long as water or circulating fluid are not left inside the pipings)
   During operation: • Power supply 100 V type: 5 to 35°C
   • Power supply 200/230 V type: 5 to 40°C
6) In locations where the ambient humidity is out of the following range or where condensation occurs.
   During transportation/storage: 15 to 85%
   During operation: 30 to 70%
7) In locations which receive direct sunlight or radiated heat.
8) In locations where there is a heat source nearby and the ventilation is poor.
9) In locations where temperature substantially changes.
10) In locations where strong magnetic noise occurs. (In locations where strong electric fields, strong magnetic fields and surge voltage occur.)
11) In locations where static electricity occurs, or conditions which make the product discharge static electricity.
12) In locations where high frequency occurs.
13) In locations where damage is likely to occur due to lightning.
14) In locations at an altitude of 3000 m or higher (Except during storage and transportation)
   ∗ For altitudes of 1000 m or higher
   Because of lower air density, the heat radiation efficiencies of the devices in the product will be lower in the location at an altitude of 1000 m or higher.
   Therefore, the maximum ambient temperature to use and the cooling capacity will lower according to the descriptions in the table below.
   Select the thermo-chiller considering the descriptions.
   ① Upper limit of ambient temperature: Use the product in ambient temperature of the described value or lower at each altitude.
   ② Cooling capacity coefficient: The product's cooling capacity will lower to one that multiplied by the described value at each altitude.

Altitude [m]	① Upper limit of ambient temperature [°C]		② Cooling capacity coefficient
	Power supply 100 V type	Power supply 200/230 V type	
Less than 1000 m	35	40	1.00
Less than 1500 m	34	38	0.85
Less than 2000 m	33	36	0.80
Less than 2500 m	32	34	0.75
Less than 3000 m	32	32	0.70

15) In locations where strong impacts or vibrations occur.
16) In locations where a massive force strong enough to deform the product is applied or a weight from a heavy object is applied.
17) In locations where there is not sufficient space for maintenance.

2. Install in an environment where the unit will not come into direct contact with rain or snow.

These models are for indoor use only.
Do not install outdoors where rain or snow may fall on them.

3. Conduct ventilation and cooling to discharge heat. (Air-cooled refrigeration)

The heat which is cooled down through air-cooled condenser is discharged.

⚠Warning

When using in a room which is shut tightly, ambient temperature will exceed the specification range stipulated in this catalog, which will activate the safety detector and stop the operation.
In order to avoid this situation, discharge the heat outside of a room by ventilation or cooling facilities.

4. The product is not designed for clean room usage. It generates particles internally.

Mounting/Installation

⚠Warning

1. Do not use the product outdoors.

2. Do not place heavy objects on top of this product, or step on it.

The external panel can be deformed and danger can result.

⚠Caution

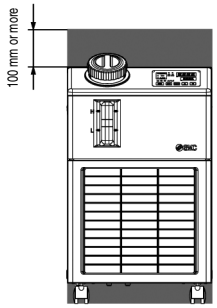
1. Install on a rigid floor which can withstand this product's weight.

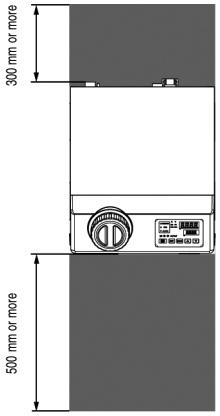
2. When you remove casters to install the product, lift the product at least 10 mm by using adjuster-foot, etc.

This product cannot be directly installed on the floor as some screws come out from the bottom of the product.

3. Refer to the operation manual for this product, and secure an installation space that is necessary for the maintenance and ventilation.

1. The heat is exhausted by ventilation of the mounted fan. If the product is operated with insufficient ventilation, ambient temperature may exceed the specification range (∗1), and this will affect the performance and life of the product. To prevent this, ensure that suitable ventilation is available (see below).
   ∗1 Power supply 100 V type: 35°C
   Power supply 200/230 V type: 40°C
2. For installation indoors, ventilation ports and a ventilation fan should be equipped as needed.





<Heat radiation amount/Required ventilation rate>

Model	Heat radiation amount kW	Required ventilation rate [m³/min]	
		Differential temp. of 3°C between inside and outside of installation area	Differential temp. of 6°C between inside and outside of installation area
HRSE012-A	Approx. 2	40	20
HRSE018-A	Approx. 4	70	40
HRSE024-A	Approx. 5	90	50

HRSE Series
Specific Product Precautions 3

Be sure to read this before handling the products. Refer to page 513 for safety instructions and pages 514 to 517 for temperature control equipment precautions.

Piping

⚠ Caution

1. Regarding the circulating fluid pipings, consider carefully the suitability for operating pressure, temperature, and circulating fluid.

If the operating performance is not sufficient, the pipings may burst during operation. Also, the use of corrosive materials such as aluminum or iron for fluid contact parts, such as piping, may not only lead to clogging or leakage in the circulating fluid circuit but also refrigerant leakage and other unexpected problems. Provide protection against corrosion when you use the product.

2. Select the piping port size which can exceed the rated flow.

For the rated flow, refer to the pump capacity table.

3. When tightening at the circulating fluid inlet and outlet, drain port or overflow port of this product, use a pipe wrench to clamp the connection ports.

4. For the circulating fluid piping connection, install a drain pan and wastewater collection pit just in case the circulating fluid may leak.

5. This product series are constant-temperature fluid circulating machines with built-in tanks.

Do not install equipment on your system side such as pumps that forcibly return the circulating fluid to the unit. Also, if you attach an external tank that is open to the air, it may become impossible to circulate the circulating fluid. Proceed with caution.

Electrical Wiring

⚠ Warning

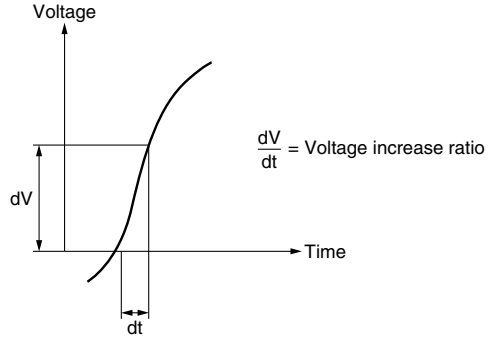
1. Grounding should never be connected to a water line, gas line or lightning rod.

⚠ Caution

1. Communication cable should be prepared by user.

2. Provide a stable power supply which is not affected by surge or distortion.

If the voltage increase ratio (dV/dt) at the zero cross should exceed 40 V/200 μsec., it may result in malfunction.



Circulating Fluid

⚠ Caution

1. Avoid oil or other foreign matter entering the circulating fluid.

2. When water is used as a circulating fluid, use tap water that conforms to the appropriate water quality standards.

Use tap water that conforms to the standards shown below (including water used for dilution of ethylene glycol aqueous solution).

Tap Water (as a Circulating Fluid) Quality Standards

The Japan Refrigeration and Air Conditioning Industry Association
JRA GL-02-1994 "Cooling water system – Circulation type – Make-up water"

	Item	Unit	Standard value	Influence	
				Corrosion	Scale generation
Standard item	pH (at 25°C)	—	6.0 to 8.0	○	○
	Electric conductivity (25°C)	[μS/cm]	100*1 to 300*1	○	○
	Chloride ion (Cl^-)	[mg/L]	50 or less	○	
	Sulfuric acid ion (SO_4^{2-})	[mg/L]	50 or less	○	
	Acid consumption amount (at pH4.8)	[mg/L]	50 or less		○
	Total hardness	[mg/L]	70 or less		○
	Calcium hardness ($CaCO_3$)	[mg/L]	50 or less		○
	Ionic state silica (SiO_2)	[mg/L]	30 or less		○
Reference item	Iron (Fe)	[mg/L]	0.3 or less	○	○
	Copper (Cu)	[mg/L]	0.1 or less	○	
	Sulfide ion (S_2^-)	[mg/L]	Should not be detected.	○	
	Ammonium ion (NH_4^+)	[mg/L]	0.1 or less	○	
	Residual chlorine (Cl)	[mg/L]	0.3 or less	○	
	Free carbon (CO_2)	[mg/L]	4.0 or less	○	

*1 In the case of [MΩ·cm], it will be 0.003 to 0.01.
- ○: Factors that have an effect on corrosion or scale generation.
- Even if the water quality standards are met, complete prevention of corrosion is not guaranteed.

3. Use an ethylene glycol that does not contain additives such as preservatives.

4. When using an ethylene glycol aqueous solution, maintain a maximum concentration of 15%.

Overly high concentrations can cause a pump overload.

5. A magnet pump is used as a circulating pump for circulating fluid.

It is particularly impossible to use liquid including metallic powder such as iron powder.

HRSE Series
Specific Product Precautions 4

Be sure to read this before handling the products. Refer to page 513 for safety instructions and pages 514 to 517 for temperature control equipment precautions.

Operation

⚠ Warning

1. Confirmation before operation

1) The fluid level of a tank should be within the specified range of "HIGH" and "LOW."
When exceeding the specified level, the circulating fluid will overflow.

2) Remove the air.
Conduct a trial operation, looking at the fluid level.
Since the fluid level will go down when the air is removed from the user's piping system, supply water once again when the fluid level is reduced. When there is no reduction in the fluid level, the job of removing the air is completed.
Pump can be operated independently.

2. Confirmation during operation

• Check the circulating fluid temperature.
The operating temperature range of the circulating fluid is between 10 and 30°C.
When the amount of heat generated from the user's equipment is greater than the product's capability, the circulating fluid temperature may exceed this range. Use caution regarding this matter.

3. Emergency stop method

• When an abnormality is confirmed, stop the machine immediately. After stopping operation, disconnect the power supply from the user's equipment.

Operation Restart Time

⚠ Caution

1. Wait five minutes or more before restarting operation after it has been stopped. If the operation is restarted within five minutes, the protection circuit may activate and the operation may not start properly.

Protection Circuit

⚠ Caution

1. If operating in the below conditions, the protection circuit will activate and an operation may not be performed or will stop.

• Power supply voltage is not within the rated voltage range of ±10%.
• In case the water level inside the tank is reduced abnormally.
• Circulating fluid temperature is too high.
• Compared to the cooling capacity, the heat generation amount of the user's equipment is too high.
• Ambient temperature is too high. (Check the ambient temperature in the specifications.)
• Ventilation hole is clogged with dust or dirt.

Maintenance

⚠ Caution

<Periodical inspection every one month>

1. Clean the ventilation hole.

If the dustproof filter becomes clogged with dust or debris, a decline in cooling performance can result.
In order to avoid deforming or damaging the dustproof filter, clean it with a long-haired brush or air gun.

<Periodical inspection every three months>

1. Inspect the circulating fluid.

1) When using tap water
• Replacement of tap water
Failure to replace the tap water can lead to the development of bacteria or algae. Replace it regularly depending on your usage conditions.
• Tank cleaning
Consider whether dirt, slime or foreign matter may be present in the circulating fluid inside the tank, and carry out regular cleanings of the tank.

2) When using ethylene glycol aqueous solution
Use a concentration meter to confirm that the concentration does not exceed 15%.
Dilute or add as needed to adjust the concentration.

<Periodical inspection during the winter season>

1. Make water-removal arrangements beforehand.

If there is a risk of the circulating fluid freezing when the product is stopped, release the circulating fluid in advance.

2. Consult a professional.

For additional methods to prevent freezing (such as commercially available tape heaters, etc.), consult a professional for advice.
