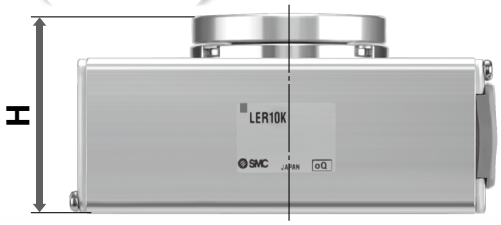
Step Motor (Servo/24 VDC)

Low profile



Basic type [mm]

Model	H
LER10	42
LER30	53
LER50	68

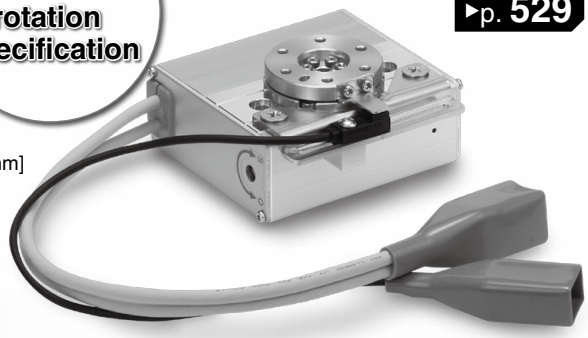
High-precision type [mm]

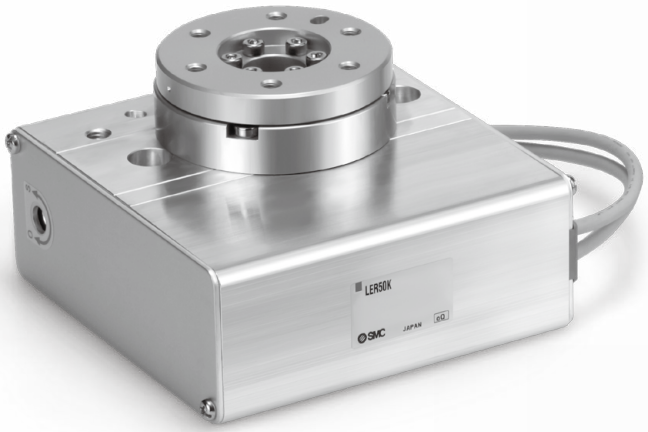
Model	H
LERH10	49
LERH30	62
LERH50	78

Continuous rotation specification

Rotation angle: 360°

▸p. 529





Shock-less/High speed actuation
Max. speed: 420°/sec (7.33 rad/sec)
Max. acceleration/deceleration: 3000°/sec² (52.36 rad/sec²)

Positioning repeatability: ±0.03° (High-precision type)
Repeatability at the end: ±0.01° (Pushing control/With external stopper)

Rotation angle
360°, 320° (310°), 180°, 90°
The value indicated in brackets shows the value for the LER10.

Can set speed, acceleration/deceleration, and position (Max. 64 points)

Energy-saving product
Automatic 40% power reduction after the table has stopped.

Size	Rotating torque [N·m]		Max. speed [°/s]		Page
	Basic	High torque	Basic	High torque	
10	0.22	0.32	420	280	▸p. 515
30	0.8	1.2			
50	6.6	10			

* Value when an external stopper is mounted.

Step Motor (Servo/24 VDC) **Controllers/Drivers**

▸p. 684

▸Step data input type
JXC51/61 Series
- 64 positioning points
- Input using controller setting kit or teaching box

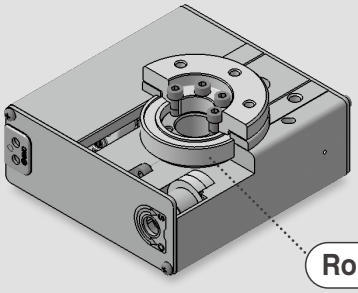
▸EtherCAT®/EtherNet/IP™/ PROFINET/DeviceNet™/ IO-Link/CC-Link direct input type
JXCE1/91/P1/D1/L1/M1 Series

▸Programless type
LECP1 Series
- 14 positioning points
- Control panel setting

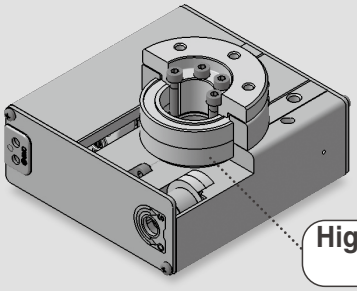
▸Pulse input type
LECPA Series
* Not applicable to the continuous rotation specification

Basic and high-precision types are available.

Basic type/LER



High-precision type/LERH

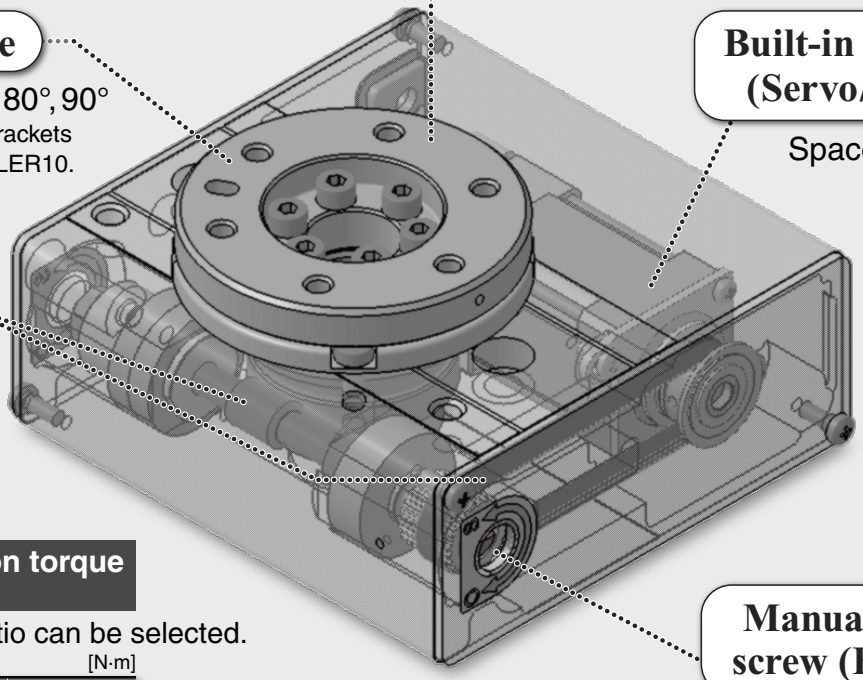


The movement in the table's radial thrust direction is reduced.

Rotation angle

360°, 320°(310°), 180°, 90°

The value indicated in brackets shows the value for the LER10.



Built-in step motor (Servo/24 VDC)

Space-saving

High torque

Output is **30** times with special worm gear. Special worm gear with reduced backlash is used.

Maximum rotation torque can be selected.

Belt deceleration ratio can be selected.

[N·m]

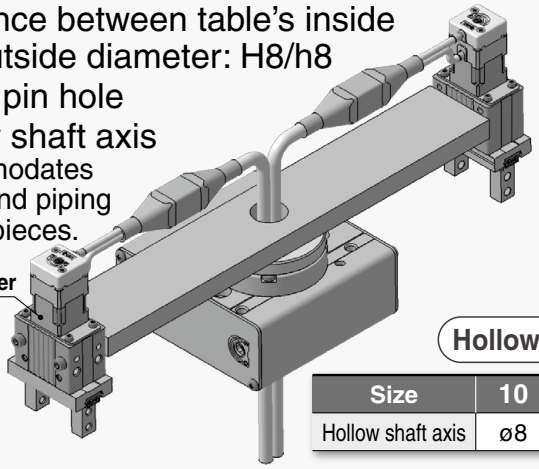
Model	Basic	High torque
LER10	0.22	0.32
LER30	0.8	1.2
LER50	6.6	10.0

Manual override screw (Both sides)

Possible to rotate the table with power OFF by manual override.

Easy Mounting of Workpieces

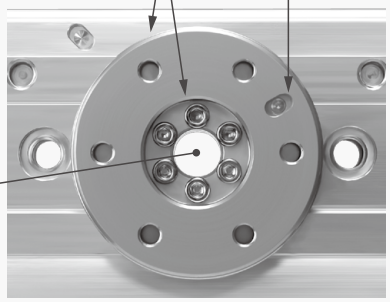
- Tolerance between table's inside and outside diameter: H8/h8
- Dowel pin hole
- Hollow shaft axis
  Accommodates wiring and piping of workpieces.



For alignment of rotation center and workpiece

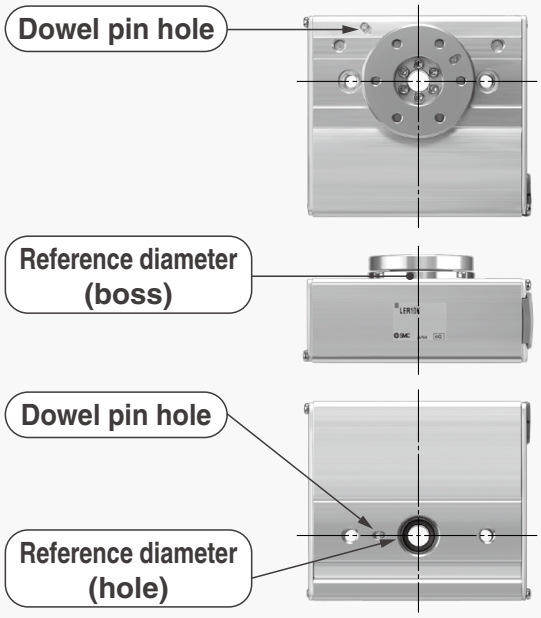
Dowel pin hole

Positioning of rotating direction



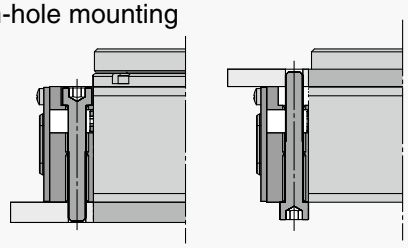
Size	10	30	50
Hollow shaft axis	ø8	ø17	ø20

Easy Mounting of the Main Body

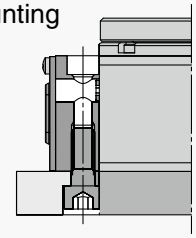


Mounting Variations

■ Through-hole mounting

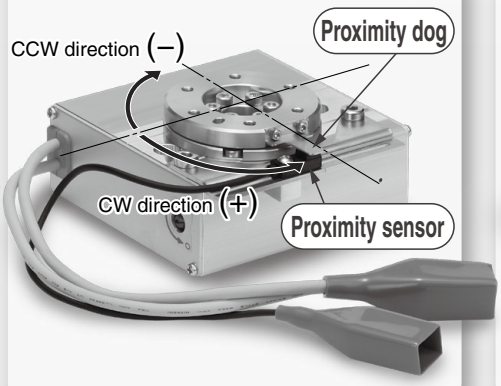


■ Body tapped mounting



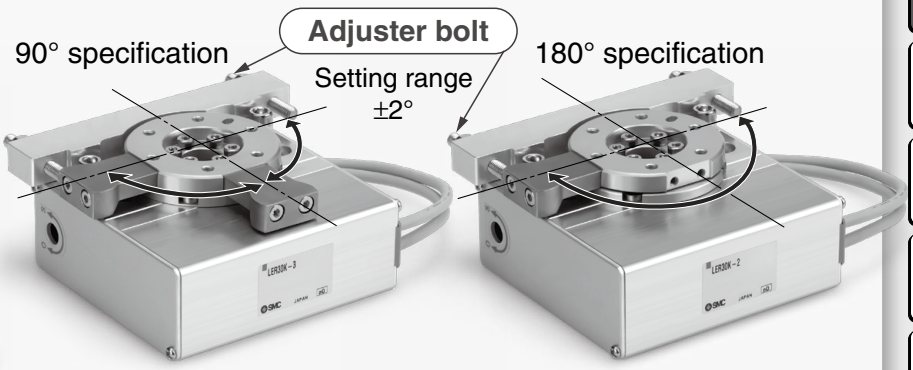
Continuous Rotation Specification

Rotation angle: 360°
Return to origin with proximity sensor

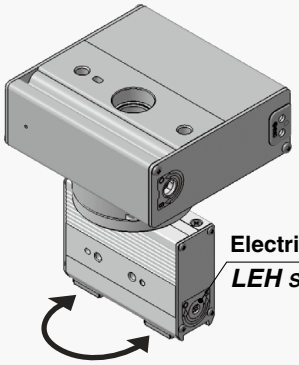


With External Stopper/Rotation Angle: 90°/180° Specification

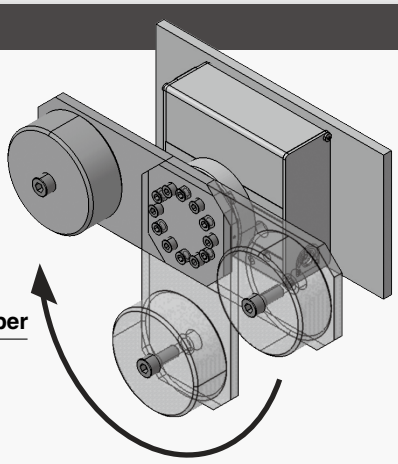
Repeatability at the end: ±0.01°



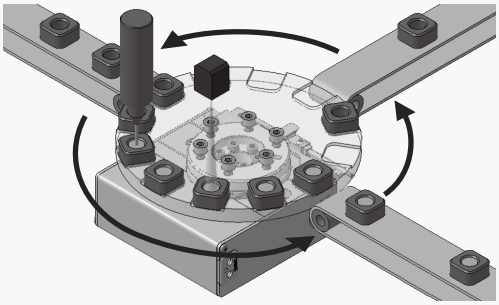
Application Examples



For rotation transfer after gripping in combination with a gripper



For vertical transfer: No change in speed due to load fluctuation



For continuous operation of multiple processes with 360° continuous rotation

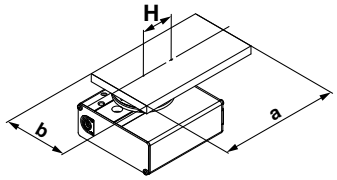
Model Selection

LER Series ▶ p. 521 | Continuous Rotation Specification LER-1 Series ▶ p. 529

Selection Procedure

Operating conditions



Electric rotary table: LER30J
Mounting position: Horizontal
Load type: Inertial load Ta
Configuration of load: 150 mm x 80 mm (Rectangular plate)
Rotation angle θ: 180°
Angular acceleration/angular deceleration $\dot{\omega}$: 1000°/sec²
Angular speed ω: 420°/sec
Load mass [m]: 2.0 kg
Distance between shaft and center of gravity H: 40 mm

Step 1 Moment of inertia—Angular acceleration/deceleration

① **Calculation of moment of inertia**

② **Moment of inertia—Check the angular acceleration/deceleration**
Select a model based on the moment of inertia and angular acceleration and deceleration while referencing the (Moment of Inertia—Angular Acceleration/Deceleration graph).

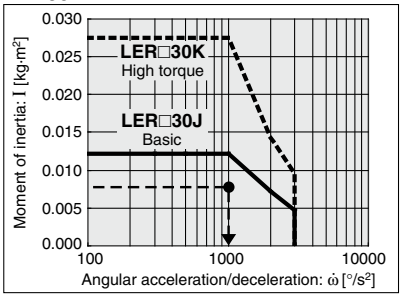
Formula

$I = m \times (a^2 + b^2)/12 + m \times H^2$

Selection example

$I = 2.0 \times (0.15^2 + 0.08^2)/12 + 2.0 \times 0.04^2$
$= 0.00802\ kg \cdot m^2$

LER30



Step 2 Necessary torque

① **Load type**
- **Static load: Ts**
- **Resistance load: Tf**
- **Inertial load: Ta**

② **Check the effective torque**
Confirm whether it is possible to control the speed based on the effective torque corresponding with the angular speed while referencing the (Effective Torque—Angular Speed graph).

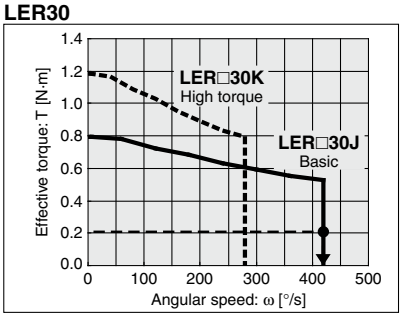
Formula

Effective torque ≥ Ts
Effective torque ≥ Tf x 1.5
Effective torque ≥ Ta x 1.5

Selection example

Inertial load: Ta
$Ta \times 1.5 = I \times \dot{\omega} \times 2\pi/360 \times 1.5$
$= 0.00802 \times 1000 \times 0.0175 \times 1.5$
$= 0.21\ N \cdot m$

LER30



Step 3 Allowable load

① **Check the allowable load**
- **Radial load**
- **Thrust load**
- **Moment**

Formula

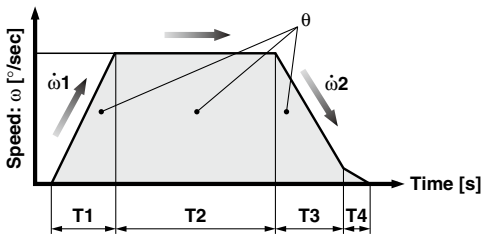
Allowable thrust load ≥ m x 9.8
Allowable moment ≥ m x 9.8 x H

Selection example

- **Thrust load**
  2.0 x 9.8 = 19.6 N < Allowable load OK
- **Allowable moment**
  2.0 x 9.8 x 0.04
  = 0.784 N·m < Allowable moment OK

Step 4 Rotation time

① **Calculation of cycle time (rotation time)**



θ: **Rotation angle [°]**
ω: **Angular speed [°/sec]**
$\dot{\omega}1$: **Angular acceleration [°/sec²]**
$\dot{\omega}2$: **Angular deceleration [°/sec²]**

T1: Acceleration time [s] ··· Time until reaching the set speed
T2: Constant speed time [s] ··· Time while the actuator is operating at a constant speed
T3: Deceleration time [s] ··· Time from the beginning of the constant speed operation to stop
T4: Settling time [s] ··· Time until positioning is completed

Formula

Angular acceleration time $T1 = \omega/\dot{\omega}1$
Angular deceleration time $T3 = \omega/\dot{\omega}2$
Constant speed time $T2 = \{\theta - 0.5 \times \omega \times (T1 + T3)\}/\omega$
Settling time $T4 = 0.2\ [s]$
Cycle time $T = T1 + T2 + T3 + T4$

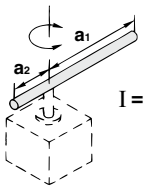
Selection example

- **Angular acceleration time** $T1 = 420/1000 = 0.42$ **sec**
- **Angular deceleration time** $T3 = 420/1000 = 0.42$ **sec**
- **Constant speed time**
  $T2 = \{180 - 0.5 \times 420 \times (0.42 + 0.42)\}/420$
  $= 0.009$ **sec**
- **Cycle time** $T = T1 + T2 + T3 + T4$
  $= 0.42 + 0.009 + 0.42 + 0.2$
  $= 1.049$ **[s]**

Formulas for Moment of Inertia (Calculation of moment of inertia I)

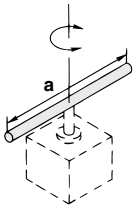
I: Moment of inertia [kg·m²] m: Load mass [kg]

1. Thin bar
Position of rotation shaft: Perpendicular to a bar through one end



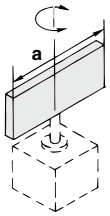
$$I = m_1 \cdot \frac{a_1^2}{3} + m_2 \cdot \frac{a_2^2}{3}$$

2. Thin bar
Position of rotation shaft: Passes through the center of gravity of the bar.



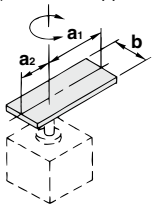
$$I = m \cdot \frac{a^2}{12}$$

3. Thin rectangular plate (cuboid)
Position of rotation shaft: Passes through the center of gravity of a plate.



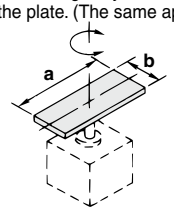
$$I = m \cdot \frac{a^2}{12}$$

4. Thin rectangular plate (cuboid)
Position of rotation shaft: Perpendicular to the plate and passes through one end. (The same applies to thicker cuboids.)



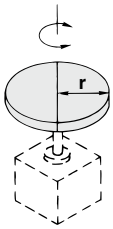
$$I = m_1 \cdot \frac{4a_1^2 + b^2}{12} + m_2 \cdot \frac{4a_2^2 + b^2}{12}$$

5. Thin rectangular plate (cuboid)
Position of the rotation shaft: Passes through the center of gravity of the plate and perpendicular to the plate. (The same applies to thicker cuboids.)



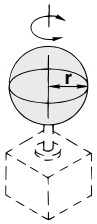
$$I = m \cdot \frac{a^2 + b^2}{12}$$

6. Cylindrical shape (including a thin disk)
Position of rotation shaft: Center axis



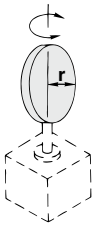
$$I = m \cdot \frac{r^2}{2}$$

7. Sphere
Position of rotation shaft: Diameter



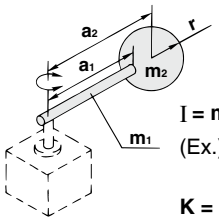
$$I = m \cdot \frac{2r^2}{5}$$

8. Thin disk (mounted vertically)
Position of rotation shaft: Diameter



$$I = m \cdot \frac{r^2}{4}$$

9. When a load is mounted on the end of the lever

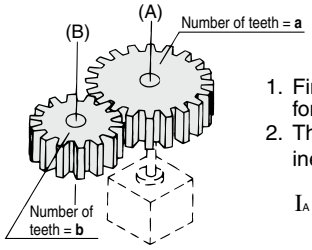


$$I = m_1 \cdot \frac{a_1^2}{3} + m_2 \cdot a_2^2 + K$$

(Ex.) Refer to **7** when the shape of m_2 is spherical.

$$K = m_2 \cdot \frac{2r^2}{5}$$

10. Gear transmission



1. Find the moment of inertia I_B for the rotation of shaft (B).
2. Then, replace the moment of inertia I_B around the shaft (A) by I_A,

$$I_A = (\frac{a}{b})^2 \cdot I_B$$

Load Type

Load type		
Static load: Ts	**Resistance load: Tf**	**Inertial load: Ta**
Only pressing force is necessary. (e.g. for clamping)	Gravity or friction force is applied to rotating direction.	Rotate the load with inertia.
	Gravity is applied.  Friction force is applied. 	Center of rotation and center of gravity of the load are concentric.  Rotation shaft is vertical (up and down). Ts = F·L **Ts:** Static load [N·m] **F :** Clamping force [N] **L :** Distance from the rotation center to the clamping position [m]	Gravity is applied to rotating direction. **Tf = m·g·L** Friction force is applied to rotating direction. **Tf = μ·m·g·L** **Tf:** Resistance load [N·m] **m:** Load mass [kg] **g :** Gravitational acceleration 9.8 [m/s²] **L :** Distance from the rotation center to the point of application of the gravity or friction force [m] μ : Friction coefficient	**Ta = I·ω̇·2π/360** **(Ta = I·ω̇·0.0175)** **Ta:** Inertial load [N·m] I : Moment of inertia [kg·m²] ω̇ : Angular acceleration/deceleration [°/sec²] ω : Angular speed [°/sec]
Necessary torque: **T = Ts**	Necessary torque: **T = Tf x 1.5***1	Necessary torque: **T = Ta x 1.5***1

• Resistance load: Gravity or friction force is applied to rotating direction.
Ex. 1) Rotation shaft is horizontal (lateral), and the rotation center and the center of gravity of the load are not concentric.
Ex. 2) Load moves by sliding on the floor.
* The total of resistance load and inertial load is the necessary torque. **T = (Tf + Ta) x 1.5**

• Not resistance load: Neither gravity or friction force is applied to rotating direction.
Ex. 1) Rotation shaft is vertical (up and down).
Ex. 2) Rotation shaft is horizontal (lateral), and rotation center and the center of gravity of the load are concentric.
* Necessary torque is inertial load only. **T = Ta x 1.5**

*1 To adjust the speed, margin is necessary for **Tf** and **Ta**.

∗1 Produced upon receipt of order (Robotic cable only)
∗2 The standard cable should only be used on fixed parts. For use on moving parts, select the robotic cable. Refer to page 758 if only the actuator cable is required.
∗3 For details on controllers/drivers and compatible motors, refer to the compatible controllers/drivers on the next page.
∗4 When pulse signals are open collector, order the current limiting resistor (LEC-PA-R-□) on page 736 separately.
∗5 When "Without controller/driver" is selected for controller/driver types, I/O cable cannot be selected. Refer to page 724 (For LECP1), or page 736 (For LECPA) if I/O cable is required.
∗6 When "Pulse input type" is selected for controller/driver types, pulse input usable only with differential. Only 1.5 m cables usable with open collector
∗7 The DIN rail is not included. It must be ordered separately.
∗8 Select "Nil" for anything other than DeviceNet™, CC-Link, or parallel input. Select "Nil," "S," or "T" for DeviceNet™ or CC-Link. Select "Nil," "1," "3," or "5" for parallel input.

⚠Caution

[CE-compliant products]

① EMC compliance was tested by combining the electric actuator LER series and the controller LEC/JXC series.
The EMC depends on the configuration of the customer's control panel and the relationship with other electrical equipment and wiring. Therefore, compliance with the EMC directive cannot be certified for SMC components incorporated into the customer's equipment under actual operating conditions. As a result, it is necessary for the customer to verify compliance with the EMC directive for the machinery and equipment as a whole.

[UL-compliant products (For the LEC series)]

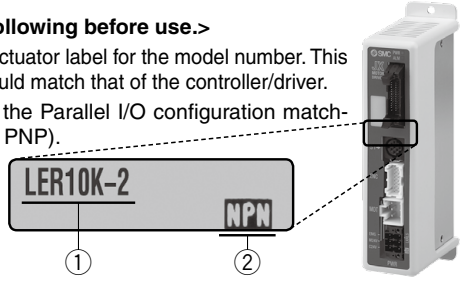
When compliance with UL is required, the electric actuator and controller/driver should be used with a UL1310 Class 2 power supply.

The actuator and controller/driver are sold as a package.

Confirm that the combination of the controller/driver and the actuator is correct.

<Check the following before use.>

① Check the actuator label for the model number. This number should match that of the controller/driver.
② Check that the Parallel I/O configuration matches (NPN or PNP).



∗ Refer to the Operation Manual for using the products. Please download it via our website: https://www.smcworld.com

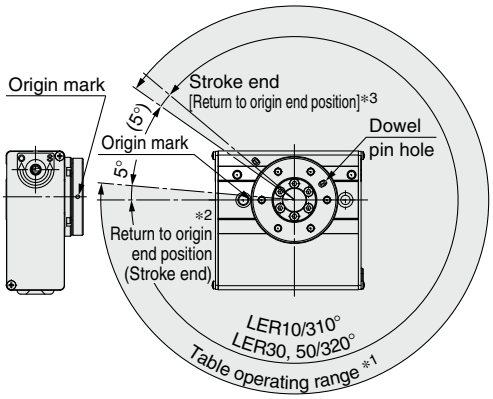
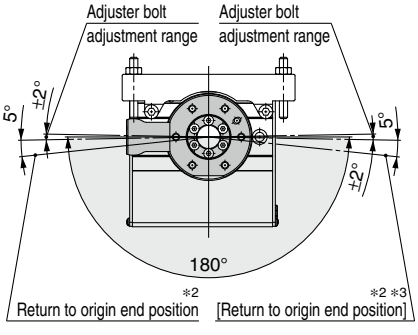
∗1 Pushing force accuracy is LER10: ±30% (F.S.), LER30: ±25% (F.S.), LER50: ±20% (F.S.).
∗2 The angular acceleration, angular deceleration and angular speed may fluctuate due to variations in the moment of inertia.
Refer to the "Moment of Inertia—Angular Acceleration/ Deceleration, Effective Torque—Angular Speed" graphs on pages 517 and 518 for confirmation.
∗3 The speed and force may change depending on the cable length, load and mounting conditions. Furthermore, if the cable length exceeds 5 m, then it will decrease by up to 10% for each 5 m. (At 15 m: Reduced by up to 20%)
∗4 A reference value for correcting an error in reciprocal operation
∗5 Impact resistance: No malfunction occurred when the slide table was tested with a drop tester in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)
Vibration resistance: No malfunction occurred in a test ranging between 45 to 2000 Hz. The test was performed in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)
∗6 Indicates the max. power during operation (including the controller)
This value can be used for the selection of the power supply.

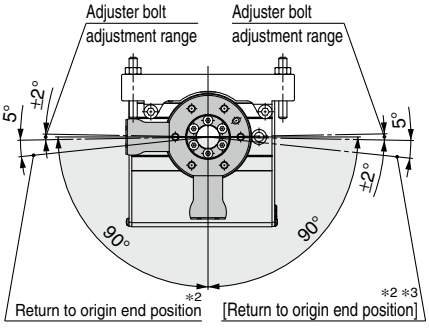
Table Rotation Angle Range



External stopper: 180°



External stopper: 90°



∗ The figures show the origin position for each actuator.

∗1 This is the range within which the table can move when it returns to origin.
Make sure workpieces mounted on the table do not interfere with the workpieces and facilities around the table.
∗2 Position after returning to origin The position varies depending on whether there is an external stopper.
∗3 [ ] for when the direction of return to origin has changed

3	I/O cable (3 m)	
5	I/O cable (5 m)	

∗1 Produced upon receipt of order (Robotic cable only)
∗2 The standard cable should only be used on fixed parts.
For use on moving parts, select the robotic cable.
Refer to page 758 if only the actuator cable is required.
∗3 The DIN rail is not included. It must be ordered separately.
∗4 Select "Nil" for anything other than DeviceNet™, CC-Link, or parallel input.
Select "Nil," "S," or "T" for DeviceNet™ or CC-Link.
Select "Nil," "1," "3," or "5" for parallel input.

⚠Caution

[CE-compliant products]

① EMC compliance was tested by combining the electric actuator LER series and the controller LEC/JXC series.
The EMC depends on the configuration of the customer's control panel and the relationship with other electrical equipment and wiring. Therefore, compliance with the EMC directive cannot be certified for SMC components incorporated into the customer's equipment under actual operating conditions. As a result, it is necessary for the customer to verify compliance with the EMC directive for the machinery and equipment as a whole.

[UL-compliant products (For the LEC series)]

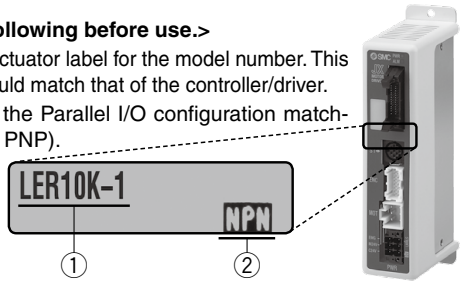
When compliance with UL is required, the electric actuator and controller/driver should be used with a UL1310 Class 2 power supply.

The actuator and controller/driver are sold as a package.

Confirm that the combination of the controller/driver and the actuator is correct.

<Check the following before use.>

① Check the actuator label for the model number. This number should match that of the controller/driver.
② Check that the Parallel I/O configuration matches (NPN or PNP).



∗ Refer to the Operation Manual for using the products. Please download it via our website: https://www.smcworld.com

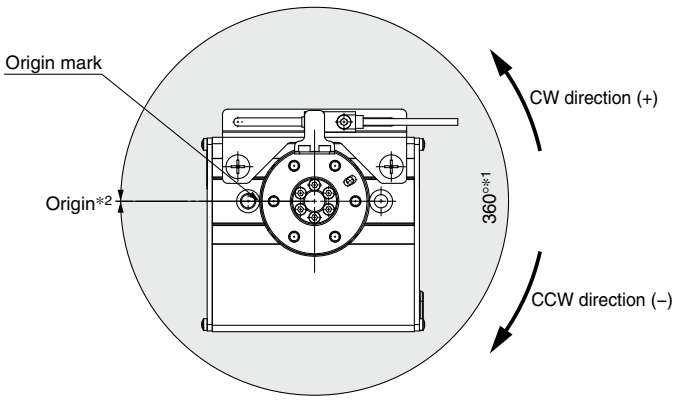
	Proximity sensor (for return to origin)/Input circuit		2-wire					
	Proximity sensor (for return to origin)/Input point		1 input					
	Power supply voltage [V]		24 VDC ±10%					
	Power*6		Max. power 14		Max. power 42		Max. power 57	

*1 Pushing force accuracy is LER10: ±30% (F.S.), LER30: ±25% (F.S.), LER50: ±20% (F.S.).
*2 The angular acceleration, angular deceleration and angular speed may fluctuate due to variations in the moment of inertia. Refer to the "Moment of Inertia—Angular Acceleration/Deceleration, Effective Torque—Angular Speed" graphs on pages 517 and 518 for confirmation.
*3 The speed and force may change depending on the cable length, load and mounting conditions. Furthermore, if the cable length exceeds 5 m, then it will decrease by up to 10% for each 5 m. (At 15 m: Reduced by up to 20%)
*4 A reference value for correcting an error in reciprocal operation
*5 Impact resistance: No malfunction occurred when the slide table was tested with a drop tester in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)
Vibration resistance: No malfunction occurred in a test ranging between 45 to 2000 Hz. The test was performed in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)
*6 Indicates the max. power during operation (including the controller)
This value can be used for the selection of the power supply.
*7 The angle displayed on the monitor is automatically reset to 0° every 360°.
To set an angle (position), use the "Relative" movement mode.
If an angle of 360° or more is set using the "Absolute" movement mode, the correct operation cannot be performed.

Table Rotation Angle Range



*1 This is the range within which the table can move.
Make sure workpieces mounted on the table do not interfere with the workpieces and facilities around the table.
*2 The sensor detection range is recognized as origin. When detecting the sensor, the table rotates in the reverse direction within the sensor detection range.

LER Series
Specific Product Precautions 1

Be sure to read this before handling the products. Refer to page 984 for safety instructions, pages 985 to 990 for electric actuator precautions.

Design / Selection

⚠Warning

1. If the operating conditions involve load fluctuations, ascending/descending movements, or changes in the frictional resistance, ensure that safety measures are in place to prevent injury to the operator or damage to the equipment.

Failure to provide such measures could accelerate the operation speed, which may be hazardous to humans, machinery, and other equipment.

2. Power failure may result in a decrease in the pushing force; ensure that safety measures are in place to prevent injury to the operator or damage to the equipment.

When the product is used for clamping, the clamping force could be decreased due to power failure, potentially creating a hazardous situation in which the workpiece is released.

⚠Caution

1. If the operating speed is set too fast and the moment of inertia is too large, the product could be damaged.

Set appropriate product operating conditions in accordance with the model selection procedure.

2. If more precise repeatability of the rotation angle is required, use the product with an external stopper, with repeatability of ±0.01° (180° and 90° with adjustment of ±2°) or by directly stopping the workpiece using an external object utilizing the pushing operation.

3. When using the electric rotary table with an external stopper, or by directly stopping the load externally, be sure to set to [Pushing operation].

Also, ensure that the workpiece is not impacted externally during the positioning operation or in the range of positioning operation.

Mounting

⚠Warning

1. Do not drop or hit the electric rotary table to avoid scratching and denting the mounting surfaces.

Even a slight deformation can cause the deterioration of accuracy and operation failure.

2. When mounting the load, tighten the mounting screws within the specified torque range.

Tightening the screws with a higher torque than recommended may result in a malfunction, while tightening with a lower torque can result in the displacement of the mounting position.

Mounting the workpiece to the electric rotary table

The load should be mounted with the torque specified in the following table by screwing the screw into the mounting female thread. If long screws are used, they can interfere with the body and cause a malfunction.

Model	Screw size	Thread length [mm]	Max. tightening torque [N·m]
LER□10	M4 x 0.7	6	1.4
LER□30	M5 x 0.8	8	3.0
LER□50	M6 x 1	10	5.0

3. When mounting the electric rotary table, tighten the mounting screws within the specified torque range.

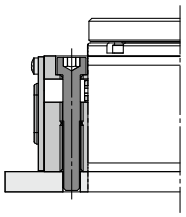
Tightening the screws with a higher torque than recommended may result in a malfunction, while tightening with a lower torque can result in the displacement of the mounting position.

Mounting

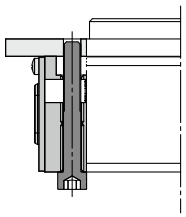
⚠Warning

Through-hole mounting

Body mounting/Bottom



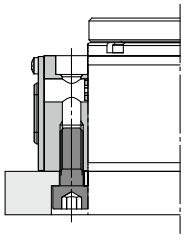
Body mounting/Top



Model	Screw size	Max. tightening torque [N·m]
LER□10	M5 x 0.8	3.0
LER□30	M6 x 1	5.0
LER□50	M8 x 1.25	12.0

Body tapped mounting

Body mounting/Bottom



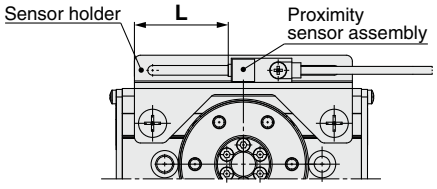
Model	Screw size	Max. tightening torque [N·m]	Max. screw-in depth [mm]
LER□10	M6 x 1	5.0	12
LER□30	M8 x 1.25	12.0	16
LER□50	M10 x 1.5	25.0	20

4. The mounting face has holes and slots for positioning. Use them for accurate positioning of the electric rotary table if required.

5. If it is necessary to operate the electric rotary table when it is not energized, use the manual override screws.

When it is necessary to operate the product by the manual override screws, check the position of the manual override screws of the product, and leave necessary space. Do not apply excessive torque to the manual override screws. This may lead to damage and malfunction.

6. The 360° type proximity sensor for return to origin can be changed ±30°. When changing the position of the proximity sensor for return to origin, tighten the screws with a tightening torque of 0.6±0.1 [N·m].



Model	L [mm] (Initial setting) Cable entry: Basic type/Entry on the left side (Between the sensor holder end face and proximity sensor end face)
LER□10-1	31/31
LER□30-1	42/42
LER□50-1	51.5/51.5

LER Series
Specific Product Precautions 2

Be sure to read this before handling the products. Refer to page 984 for safety instructions, pages 985 to 990 for electric actuator precautions.

Handling

⚠Caution

1. When an external guide is used, connect it in such a way that no impact or load is applied to it.
Use a free moving connector (such as a coupling).

2. The moving force should be the initial value (100%).
If the moving force is set below the initial value, there may be variation in the cycle time, or an alarm may be generated.

3. INP output signal

1) Positioning operation
When the product comes within the set range of the step data [In position], the INP output signal will turn ON.
Initial value: Set to [0.50] or higher.

2) Pushing operation
When the effective force exceeds the [Trigger LV] value (including force during operation), the INP output signal will turn ON.
The [Trigger LV] should be set between 40% and [Pushing force].

a) To ensure that the clamping and external stop is achieved by [Pushing force], it is recommended that the [Trigger LV] be set to the same value as the [Pushing force].

b) When the [Trigger LV] and the [Pushing force] are set below the specified range, there is the possibility that the INP output signal will turn ON from the pushing start position.

<Pushing force and trigger LV range>

Model	Pushing force set value [%]	Trigger LV set value [%]
LER□	40 to 50	40 to 50

4. When using the electric rotary table with an external stopper, or by directly stopping the load externally, be sure to set to [Pushing operation].
Also, ensure that the workpiece is not impacted externally during the positioning operation or in the range of positioning operation.
If the product is used in the positioning operation mode, there may be galling or other problems when the product/workpiece comes into contact with the external stopper or external object.

5. When the table is stopped by the pushing operation mode (stopping/clamping), set the product to a position of at least 1° away from the workpiece. (This position is referred to as the pushing start position.)
If the pushing start position (stopping or clamping) is set to the same position as the external stop position, the following alarms may be generated and operation may become unstable.

a. "Posn failed"
The product cannot reach the pushing start position within the target time.

b. "Pushing ALM"
The product is pushed back from the pushing start position after starting to push.

c. "Deviation over flow"
Displacement exceeding the specified value is generated at the pushing start position.

6. There is no backlash effect when the product is stopped externally by pushing operation.
For the return to origin, the origin position is set by the pushing operation.

Handling

⚠Caution

7. For the specification with an external stopper, an angle adjuster bolt is provided as standard.
The rotation angle adjustment range is ±2° from the angle rotation end.
If the angle adjustment range is exceeded, the rotation angle may change due to insufficient strength of the external stopper.
One revolution of the adjuster bolt is approximately equal to 1° of rotation.

8. In case that gravity is added to the workpiece along the rotation direction when product is mounted vertically, the workpiece may fall down when "SVON" signal is OFF or EMG is not energizing.

9. When mounting the product, secure a bending diameter of 40 mm or longer for the motor cable.

10. The 360° type proximity sensor for return to origin responds when it approaches anything made of metal. For this reason, be sure to keep metal objects other than the proximity dog away from the sensor during return to origin.
Recommended distance: 5 mm or more

Maintenance

⚠Danger

1. The high-precision type bearing is assembled by pressing into position. It is not possible to disassemble it.
