

Clean Air Filter

SFD Series

RoHS

Hollow Fiber Element

- Nominal filtration rating: **0.01** μm (filtration efficiency 99.99%)
- Initial pressure drop: **0.03** MPa (at inlet pressure 0.7 MPa, maximum flow)
- Maximum operating pressure: **1.0** MPa (at 20°C)

SFD100/ **New** 110

SFD200

SFD101/102 Made to Order

Up to 100 L/min(ANR)/Up to 120 L/min(ANR)

Up to 500 L/min(ANR)

Up to 100 L/min(ANR)

Restriction of Hazardous Substances
RoHS compliant

Clear resin case

- Easy to confirm a dirty element.
- Polycarbonated material is resistant to alcohol-based cleaning solutions.

Element replaceable (Cartridge type)

Replaceable hollow fiber elements

Piping variation

- Clean One-touch fittings
- Female thread

Metal Case Type

Stainless steel or aluminum cases are available.

Metal case suitable for an atmosphere exposed to organic solvents and chemicals (Fluids: Air and (Nitrogen))

Maximum operating pressure (at 20°C)	1.0 MPa (in case of nitrogen: 0.99 MPa)										
Operating temperature	5 to 45°C										

Note The clean air filter is designed for the filtration of solid objects. It is not suitable for the separation of water and oil.

Integrated production in a clean environment

Under a clean environment, all components have undergone ultrasonic cleaning. Assembly, inspection and antistatic double packaging processes are conducted in an integrated production system.

Assembly environment

- Clean room : Class **M5.5** (ISO class **7**)^{*}
- Clean bench : Class **M3.5** (ISO class **5**)^{*}

^{*} Fed. Std. 209E () : based on ISO14644-1.

Application Examples

Clean blow

Blow of ionizer

- **Substitution of chamber**
- **Fluid pumping, etc.**

^{*} When blowing, take care not to entrain ambient air which could contaminate the workpieces.

Circuit Examples

^{*} The equipment mounted to the outlet side of SFD should be cleaned by flushing and have the same level of cleanliness as SFD.

Hollow fiber membrane

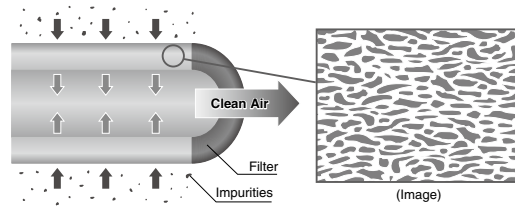

The hollow fiber membrane has a porous construction with numerous fine holes on a straw type fiber membrane wall. The hollow fiber membrane filter traps and filtrates the impurities from the compressed air through the overlapping layered fine holes.

SFD Series Model Selection

Select the model by using the following procedures involving the inlet pressure and the maximum flow rate.

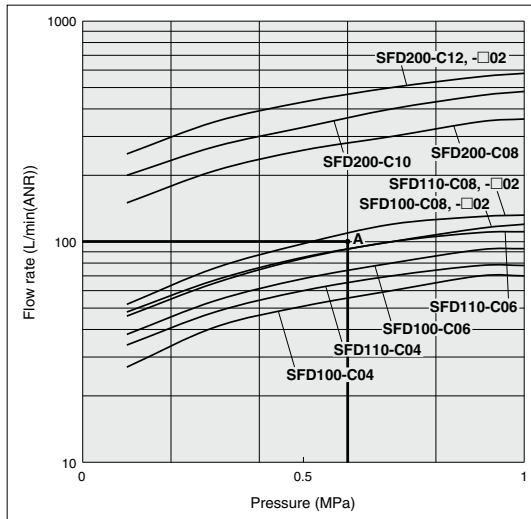

[Example] Inlet pressure: 0.6 MPa

Maximum flow rate: 100 L/min (ANR)

1. Obtain the intersection A for the inlet pressure and the maximum flow rate by using the maximum flow rate chart.

2. If the obtained intersection A is above the maximum flow rate line, the SFD110-C08, -□02, SFD200-C12, -□02, -C10, or -C08 are selected.

Maximum Flow Rate

Related Products

<Pre-filters for SFD Series>

Mist Separator **AM Series**

Refer to pages 329 to 336 for details.

AM Series

Model	AM150C	AM250C
Rated flow (L/min (ANR))	300	750
Port size (Nominal size B)	1/8, 1/4	1/4, 3/8

Specifications

Fluid	Compressed air
Max. operating pressure	1.0 MPa
Min. operating pressure ^{Note)}	0.05 MPa
Proof pressure	1.5 MPa
Ambient temperature	5 to 60°C
Nominal filtration rating	0.3 μm (Filtering efficiency 99.9%)

Note) With auto drain: 0.1 MPa (N.O. type), 0.15 MPa (N.C. type)

Micro Mist Separator **AMD Series**

Refer to pages 337 to 345 for details.

AMD Series

Model	AMD150C	AMD250C
Rated flow (L/min (ANR))	200	500
Port size (Nominal size B)	1/8, 1/4	1/4, 3/8

Specifications

Fluid	Compressed air
Max. operating pressure	1.0 MPa
Min. operating pressure ^{Note)}	0.05 MPa
Proof pressure	1.5 MPa
Ambient temperature	5 to 60°C
Nominal filtration rating	0.01 μm (Filtering efficiency 99.9%)

Note) With auto drain: 0.1 MPa (N.O. type), 0.15 MPa (N.C. type)

Super Mist Separator **AME Series**

Refer to pages 355 to 362 for details.

AME Series

Model	AME150C	AME250C
Rated flow (L/min (ANR))	200	500
Port size (Nominal size B)	1/8, 1/4	1/4, 3/8

Specifications

Fluid	Compressed air
Max. operating pressure	1.0 MPa
Min. operating pressure	0.05 MPa
Proof pressure	1.5 MPa
Ambient temperature	5 to 60°C
Nominal filtration rating	0.01 μm (Filtering efficiency 99.9%)

Odor Removal Filter **AMF Series**

Refer to pages 363 to 370 for details.

AMF Series

Model	AMF150C	AMF250C
Rated flow (L/min (ANR))	200	500
Port size (Nominal size B)	1/8, 1/4	1/4, 3/8

Specifications

Fluid	Compressed air
Max. operating pressure	1.0 MPa
Min. operating pressure	0.05 MPa
Proof pressure	1.5 MPa
Ambient temperature	5 to 60°C
Nominal filtration rating	0.01 μm (Filtering efficiency 99.9%)

SFD Series

Specific Product Precautions 1

Be sure to read this before handling the products. Refer to page 9 for safety instructions and pages 10 to 12 for air preparation equipment precautions.

Selection

Warning

1. Thoroughly and carefully confirm the purpose of use, required specifications and operating conditions (fluid, pressure, flow rate, nominal filtration rating and environment) then select a model within the specifications.
2. The product is not certified under the High Pressure Gas Safety law, so for nitrogen, its maximum operating pressure will be 0.99 MPa (gauge pressure).
3. Contact us beforehand if the product will be used in an application such as a caisson shield, breathing, food and/or medical treatment that affects the human body directly or indirectly.
4. If the compressed air includes ozone, do not use it since it may damage the product or cause malfunction. When it includes ozone, use a clean gas filter (SFA/B/C).

Mounting

Warning

1. **Operation manual**
Mount the product after reading and understanding the operation manual. Keep it in a location where it can easily be found.
2. **Flushing**
Flush the piping line when the filter is used for the first time or has been replaced. In the event of connecting such as piping, flush (air blow) when using this product for the first time or replacing its elements in order to reduce the affect of the dust generated from the connection, etc. Flushing the line is also required to eliminate contamination resulting from the piping line installation. Therefore, be sure to flush the line before actually running the system. Fix all mounting parts for use.
3. **Use fittings with resin threads for the connection of fittings to the IN and OUT ports.**
Using fittings with metal threads could damage the IN and OUT ports (SFD100 only).
4. **Connect tubing to the IN and OUT One-touch fittings in accordance with the precautions for One-touch fittings.**

Caution

1. **Connect the piping in accordance with the flow direction marked on the case.**
If connected in reverse, the element could break.
2. **The mounting orientation does not affect the performance, but if excessive force is applied to the SFD100 series, the body may become disconnected from the bracket.**
Therefore, take particular care about the mounting orientation.

Caution on Installation

Warning

1. **The material of the element is polycarbonate.**
The material is resistant to wiping with alcohol, but is not suitable for atmospheres or places with organic solvents, chemicals, cutting oils, synthetic oils, ester base compressor oils, alkalis or thread locking agents.

Caution

1. **If the pressure difference (pressure drop) between the inlet and the outlet exceeds 0.1 MPa, it can cause damage to the product.**
2. **Do not install the product in a place where it can be affected by a pulsation (including surge pressure) of over 0.1 MPa.**
3. **Use caution regarding the particles that may be emitted from the outlet side of a pneumatic equipment.**

Installation of a pneumatic equipment on the outlet side can deteriorate the cleanliness because a particle will be generated from the equipment.
The mounting position of the pneumatic equipment needs to be considered.

4. **Set the air flow capacity with an initial pressure drop of 0.03 MPa or less. If the initial pressure drop is set to be high, its service life will be shorten due to clogging.**
5. **Determine the product by the maximum consumption flow rate.**

When using compressed air for an air blow application, calculate the maximum volume of air that will be consumed before selecting the SFD series product size.

6. **Generally, the following pollutant particles are contained in compressed air.**

[Pollutant particle substances contained in the compressed air]

- Moisture (drainage)
 - Dusts and particles which are in the surrounding air
 - Deteriorated oil which is discharged from the compressor
 - Solid foreign matter such as rust and/or oil in the piping
- 1) The SFD series is not compatible with compressed air which contains fluids such as water and/or oil.
 - 2) Install a dryer (IDF, IDG, ID series), mist separator (AM series), micro mist separator (AMD series), super mist separator (AME series), or odor removal filter (AMF series), etc., for the source of the air for the SFD series.

7. **Using with a flow-rate much higher than its specification could lead to exceeding the differential pressure the product can resist.**

Use the product within its specifications. Also, take care about the replacement period of the product, taking into consideration that the differential pressure of the filter will increase over time.

SFD Series Specific Product Precautions 2

Be sure to read this before handling the products. Refer to page 9 for safety instructions and pages 10 to 12 for air preparation equipment precautions.

Piping

⚠ Caution

1. Unpacking the sealed package

Since the filter is sealed in an antistatic double bag, the inner package should be unpacked in a clean atmosphere (such as a clean room).

2. Apply a wrench to 2 chamfered flats or hexagon portion on the IN side or the OUT side to prevent the housing from rotating.

3. Always tighten threads with the proper tightening torque.

When attaching fittings to the product, tighten with the proper tightening torque shown below.

Material	Tightening torque (N·m)
Resin	2 to 3
Metal	12 to 14

4. Check the arrow mark on the case which shows the flow direction to connect the IN and OUT ports correctly.

If connected in reverse, the element could break.

Maintenance

⚠ Warning

1. Follow the maintenance procedures in the operation manual. If handled incorrectly equipment or device can be damaged or cause a malfunction.

2. When removing the product, exhaust the air and ensure the air is released to atmosphere before removing it.

3. When the element comes to the end of its life, immediately replace it with a new filter or replacement element.

Service life of element

The service life of the element ends when either of the following two conditions occurs.

- 1) After 1 year of usage has elapsed.
- 2) When the pressure drop reaches 0.1 MPa even though the operating period has been less than 1 year.

Operating Environment

⚠ Warning

1. Do not operate under the conditions listed below due to a risk of malfunction.

In locations having corrosive gases, organic solvents, and chemical solutions, or in locations in which these elements are likely to adhere to the equipment.

In locations in which salt water, water, or water vapor could come in contact with the equipment.

In locations that are exposed to direct sunlight. (Shield the equipment from sunlight to prevent its resin material from ultraviolet ray degradation or overheating.)

In locations that have a heat source and poor ventilation. (Shield the equipment from heat sources to protect it from softening degradation due to radiated heat.)

In locations that are exposed to shocks and vibrations.

In locations with high humidity or a large amounts of dust.

2. When the product is used for blowing, use caution to prevent the work from being damaged by entrained air from the surrounding area.

When the compressed air is used for air blow, the exhausted air from the blow nozzle may have taken in airborne foreign matter (such as solid particle, fluid particle) from the surround air. The foreign matter will be sprayed on the work, and the airborne foreign matter may adhere to it. Therefore, use caution for the surrounding environment.

Other Tube Brands

⚠ Caution

1. When tubing of brands other than SMC's are used, verify that the tubing O.D. satisfies the following accuracy;

- 1) Polyolefin tube: Within ± 0.1 mm
- 2) Polyurethane tubing: Within $+0.15$ mm, within -0.2 mm
- 3) Nylon tubing: Within ± 0.1 mm
- 4) Soft nylon tubing: Within ± 0.1 mm

Do not use tubing which does not meet these outside diameter tolerances. It may not be possible to connect them, or they may cause other trouble, such as air leakage or the tube pulling out after connection.

The recommended tube for the clean fitting is polyolefin tube. Other tubes can satisfy the performance in terms of leakage, tensile strength, etc., but impair the cleanliness. Note this point for use.
