

Conforming to OSHA Standard
Pressure Relief 3 Port Valve with Locking Holes

VHS20/30/40/50, VHS2510/3510/4510/5510 Series

Single Action

Double Action

RoHS

Weight ↓
 Max. **60%**
Lighter
 * VHS20

Sonic Conductance
 $C[\text{dm}^3/\text{s}\cdot\text{bar}]$
 Max. **45%**
Up

Energy Saving
 Zero blow-by of the air during switching of the handle

Safety Measure

Double action

Step2

↓
Step1

With locking holes

With the indicator window

Combination with a (modular type) F.R.L. is possible.

Lightweight

Resin handle and bonnet is standard.

Weight Maximum

60% Lighter

Material: Resin (Handle, bonnet)

76 g

VHS20 (Aluminum body is standard): 190 g

VHS20-□A

Aluminum handle and bonnet type is available.

VHS20-□B

Safety Measure

Can prevent accidents caused by inadvertent air supply problems.

With the indicator window

The supply/exhaust status of the air flow can be verified at a glance in the indicator window.

SUP: Supply **EXH**: Exhaust

Double action

Push the handle and then turn, 2-step action prevents malfunction.

Step1
Push down the handle

Step2
Turn the handle

With locking holes

When in the exhaust position, the valve may be padlock secured. Prevents accidental start-ups while personnel are cleaning or servicing equipment.

OSHA standard (Occupational Safety and Health Administration Department of Labor)

For safety control, OSHA rule requires energy sources for certain equipment be turned off or disconnected and that the device either be locked or labelled with a warning tag.

* Recommended lock shackle diameter size: $\phi 5$ or more

Shackle diameter

Options

With bracket

Built-in silencer (EXH port)

Made to Order (-X1)

Red body is available.

Variations

Port size 1/8, 1/4, and 3/8 are now available for double action type.

VHS20/30/40/50 Series

VHS2510/3510/4510/5510 Series Specific Product Precautions 1

Be sure to read this before handling the products.

Refer to page 8 for safety instructions and pages 9 to 15 for 3/4/5 port solenoid valve precautions.

Precautions on Design

⚠ Warning

1. Please consult with SMC in cases where the ambient environment does not permit leakage or if fluid other than air is used.
2. Do not apply negative pressure. It may result in malfunction.
3. Do not supply air pressure from ports other than the 1 (P) port.
The valve will malfunction when air pressure is supplied from other ports.
4. We recommend using a lock with a shackle diameter of $\phi 5$ or more. If a lock with a shackle diameter of less than $\phi 5$ is to be used, please test it on the actual machine.

Selection

⚠ Warning

1. In some cases, mineral oil grease used for internal parts and sealant may be carried to the output side.

Please contact SMC if this causes any inconvenience in use.

Installation and Adjustment

⚠ Warning

1. Confirm the symbols “1” and “2” before the valve is connected. The port marked “1” is the air inlet and the port marked “2” is the outlet.

Pressurization is only possible via the inlet port (1). Reverse connection may cause malfunction. The port symbols and corresponding piping types are shown in the table below.

Port symbol	Piping type
1	Inlet
2	Outlet
3	Exhaust

⚠ Caution

1. The valve must be switched to each position instantly and securely. Stopping the knob between the extreme positions may cause malfunction.
2. Do not remove the mounting screws from the bonnet.
As this may cause malfunction.
3. Double action type requires two actions (push the handle + turn). Confirm that the handle is pushed properly before turning it. If the handle is not pushed properly to the end, the internal parts will be broken by turning the handle.

Piping

⚠ Warning

1. Before piping is connected, the pipes should be thoroughly blown through with air (flushing) or washed to remove chips, cutting oil and other debris from inside.
Should they remain, they could cause malfunction.
2. When connecting pipes and fittings, etc., be sure that neither chips from the pipe threads nor sealing material get inside the valve.
When using sealant tape, leave 1.5 to 2 thread ridges exposed at the end of the pipe/fitting.
3. When screwing a piping component into the valve, secure the female threaded side and apply the recommended tightening torque.
Under tightening may result in loosening or sealing failure while over tightening may cause damage to threads and other problems.

Recommended tightening torque

Unit: N·m

Connection thread	1/8	1/4	3/8	1/2	3/4	1
Torque	7 to 9	12 to 14	22 to 24	28 to 30	28 to 30	36 to 38

Air Supply

⚠ Warning

1. Use clean air.
Do not use compressed air which contains chemicals, synthetic oils containing organic solvents, salts or corrosive gases, etc., as this can cause damage or malfunction.
2. Install an air dryer or after cooler on the upstream side of the pressure release 3 port valve because air containing excessive drainage may cause malfunction.

⚠ Caution

1. Install an air filter of 5 μm or less filtration on the inlet side.
2. Install a mist separator on the inlet side to remove carbon powder from the compressor or other equipment. An excessive amount of carbon dust ingress via the inlet may cause the valve to malfunction.

Refer to “SMC Air Preparation System” for further details on compressed air quality.

VHS20/30/40/50 Series

VHS2510/3510/4510/5510 Series Specific Product Precautions 2

Be sure to read this before handling the products.

Refer to page 8 for safety instructions and pages 9 to 15 for 3/4/5 port solenoid valve precautions.

Operating Environment

Warning

1. Do not use valves where there is direct contact with, or in atmospheres of, corrosive gases, chemicals, salt water, water or steam.
2. Do not use in an explosive atmosphere.
3. Do not use in locations subject to vibration or impact. Confirm the specifications for each series.
4. A protective cover should be used to shield valves from direct sunlight.
5. Shield valves from radiated heat generated by nearby heat sources.
6. Employ suitable protective measures in locations where there is contact with water droplets, oil, or welding spatter.
7. Install a silencer into port 3 (R) to prevent the ingress of dust if there is a lot of dust in the atmosphere.

If dust enters the valve via port 3 (R), it may cause air leakage.

If above conditions (1 to 7) are applicable, use metal handle/bonnet type for your safety.

Maintenance

Warning

1. Perform maintenance procedures as shown in the operation manual.
If handled improperly, malfunction or damage of machinery or equipment may occur.
2. Do not disassemble the product.
Improper handling will cause malfunction or breakage of the machinery or equipment.
3. When equipment is to be removed, first confirm that measures are in place to prevent dropping of driven objects and run-away of equipment, etc. Then cut the supply air pressure and electric power, and exhaust all compressed air from the system using its residual pressure release function.

When the equipment is to be started again after remounting or replacement, first confirm that measures are in place to prevent lurching of actuators and then confirm that equipment operates normally.

Caution

1. Once a lubricant is introduced, be sure to continue lubrication.

If it is discontinued, malfunction may result due to loss of the initial lubricant. Apply class 1 turbine oil (ISO VG32) as a lubricant. Use of other lubricants may cause malfunction.

Built-in Silencer (Option) Bronze Sintered Metal Element

Caution

Products made of bronze may contain uneven color due to the oxidization process of the atmosphere.

However, this oxidization process occurs in the limited range of less than 1 μ m of thickness and is so thin as to not affect the product characteristics.

The uneven color occurs depending on the storage duration before utilization (stock as a product, stock in customer)

* If this is a problem, please contact SMC so that SMC can pre-treat them with nickel plating.
