Clean One-touch Fittings For Driving Air Piping

KPQ/KPG Series

KPQ Series Brass (electroless nickel plated) Release button: Light gray

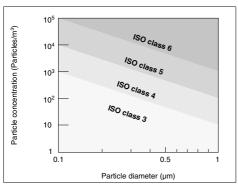

KPG Series Stainless steel 304 Release button: Light blue

Made to Order (Refer to page 357 for details.)

Particulate Generation Classifications

Applicable Tubing

Tubing material	PFA, Polyurethane
Tubing O.D.	ø4, ø6, ø8, ø10, ø12

FEP, nylon and soft nylon tubing, and tubing not compatible with the clean series can also be used. However, the degree of clean performance will be reduced.

Specifications

Class 3 Note 1)
Air
1 MPa Note 2)
-100 kPa
3 MPa
−5°C to 60°C
JIS B0203 (Taper thread for piping)
Fluorine-based grease

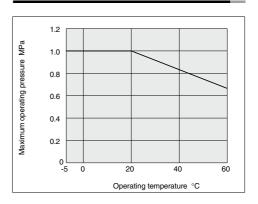

Note 1) Refer to particle generation classifications

This falls outside of the grade because fluorine grease is applied to the internal seal materials.

Note 2) The maximum operating pressure is the value at 20°C. Refer to the operating pressure curve for other temperatures.

Note 3) Do not use the fittings with a leak tester or for vacuum retention because they are not guaranteed for zero leakage.

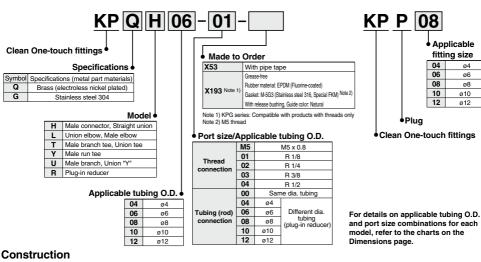

Relation between Operating Temperature and Maximum Operating Pressure

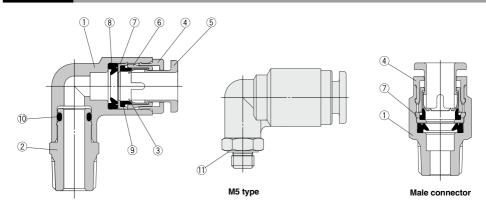

Note) Refer to "SMC Pneumatic Clean Series" (CAT.E02-23) for details

KP/KPQ/KPG Series Specific Product Precautions 1

Be sure to read this before handling the products.

Refer to back page 50 for Safety Instructions and pages 13 to 17 for Fittings and Tubing Precautions.

Selection

∕ Caution

 Please consult with SMC regarding fluids other than air, water and nitrogen gas.

Handling

- 1. Store away from direct sunlight at 40°C or less.
- 2. Open the inner package of double packaging in a clean room or other clean environment.

Installation of Threads

∧ Caution

Be sure to wrap sealing tape around the taper threads for both resin and metal threads.

If used without sealing tape air leakage can occur.

- 1. KP Series (with resin thread)
 - 1) Winding of sealant tape

Wrap the pipe tape 2 to 3 times around the threads, leaving 1.5 to 2 thread ridges exposed at the end of the threads.

2) Tightening

After tightening by hand, tighten an additional 2 to 3 turns using a tightening tool.

- 2. KPQ/KPG Series (with metal thread)
 - 1) For M5

After tightening by hand, tighten approximately 1/6 turn further using a tightening tool. Reference values for the tightening torque are 1 to 1.5 N·m. Excessive tightening can cause air leakage due to thread damage or deformation of the gasket, etc. Insufficient tightening can cause loose threads and air leakage. etc.

- 2) Taper thread
 - (1) Winding of sealant tape

Wrap the pipe tape 2 to 3 times around the threads, leaving 1 thread ridges exposed at the end of the threads

(2) When installing, tighten with the proper torque shown in the table below. As a rule, this corresponds to two or three turns with a tool after tightening by hand.

Connection thread size	Proper tightening torque (N·m)	
R 1/8	3 to 5	
R 1/4	8 to 12	
R 3/8	15 to 20	
R 1/2	20 to 25	

Installation of Threads

⚠ Caution

3. Tightening tools

Tighten with an appropriate wrench using the hexagon wrench flats on the body.

Position the wrench on the base as close as possible to the threads. If the size of the wrench is not suitable for the hexagon wrench flats, the wrench flats may be crushed.

Installation and Removal of Tubing

- 1. Installation of tubing
 - 1) Grease is not used due to the KP series oil-free specifications. For this reason, greater insertion force is required when tubing is installed. In particular, polyurethane tubing may fold when inserted due to its softness. Hold the end of the tubing, and insert it all the way in slowly and securely. Refer to dimension "M" in the dimension drawings for guidance on the insertion depth of tubing.
- 2. Removal of tubing
 - The outside diameter of tubes that have been used at high temperatures or for long periods of time will expand, and in some cases pipe fittings cannot be reattached. Tubes that cannot be attached should be discarded and replaced with new ones.

KP/KPQ/KPG Series Specific Product Precautions 2

Be sure to read this before handling the products.

Refer to back page 50 for Safety Instructions and pages 13 to 17 for Fittings and Tubing Precautions.

Operating Environment

⚠ Warning

- Do not use in environments or locations where there is a danger of damage to fittings and tubing.
 - For fitting and tubing materials, refer to specifications and construction drawings, etc.
- 2. Provide shade in locations which receive direct sunlight.

∧ Caution

- KP series are special One-touch fittings for use on clean blowing and washing lines.
 - Please consult with SMC regarding other types of applica-

Seal material: The durability of EPDM with respect to mineral oils is inferior, making it unsuitable for piping in general pneumatic equipment.

Use KPQ and KPG series for piping to general pneumatic equipment.

Maintenance

∧ Caution

- 1. Tightening of blow fittings (resin taper threads for piping) Since KP series taper threads are made of resin, minute leakage may gradually occur due to stress relaxation. Perform periodic inspections, and if leakage is detected correct the problem by further tightening. If additional tightening becomes ineffective, replace the fitting with a new product.
- 2. Check for the following during regular maintenance, and replace components as necessary.
 - a) Scratches, gouges, abrasion, corrosion
 - b) Leakage, refer to item 3 regarding taper thread leakage.
 - c) Twisting, flattening or distortion of tubing
 - d) Hardening, deterioration or softness of tubing
- Do not repair or patch the replaced tubing or fittings for reuse.
