Set Pressure Range and Rated Pressure Range

Set the pressure to within the rated pressure range.

The set pressure range is the range of pressure that is possible in setting.

The rated pressure range is the range of pressure that satisfies the specifications (accuracy, linearity, etc.) on the switch.

Although it is possible to set a value outside the rated pressure range, the specifications will not be guaranteed even if the value stays within the set pressure range.

Switch		Pressure range						
		-100 kPa	0	0.4 MPa	0.5 MPa	1 MPa	10 MPa	15 MPa
For 1 MPa (For Air)	ISE70		0	1 MPa				
		-100 kPa (-0.1 MPa)		1 MPa				
For 10 MPa (For General Fluids)	ISE75		0	10 MPa				
			0.4 MPa	10 MPa				
For 15 MPa (For General Fluids)	ISE75H		0	15 MPa				
				0.5 MPa	15 MPa			

* The ISE75(H) switch shows zero (0) when the pressure being applied goes below the lower limit of the set pressure range, when the zero-cut off display function is selected.

■ Rated pressure range of switch

Note) If it is predicted that the pressure, such as the water hammer or surge pressure fluctuates rapidly, refer to the Handling Precautions stated in the Operation Manual at SMC website (<http://www.smcworld.com>).

Note) The connector faces down (toward the piping). Do not attempt to rotate the connector, as it is not rotatable.

Functions

A Display calibration function

Fine adjustment of the indicated value of the pressure sensor can be made within the range of $\pm 5\%$ of the read value. (The scattering of the indicated value can be eliminated.)

Note) When the display calibration function is used, the set pressure value may change ± 1 digit.

B Peak/Bottom hold function

This function constantly detects and updates the maximum and minimum pressure values and allows the unit to hold the display value.

C Keylock function

Prevents operation errors such as accidentally changing setting values.

D Zero-clear function

The measured pressure reading can be adjusted to zero. More specifically, the factory-set reading can be corrected to within $\pm 7\%$ F.S.

E Display unit switching function

Display units can be switched with this function.

Unit/Reading resolution	ISE70	ISE75/75H
MPa	0.01	0.1
kgf/cm ²	0.1	1
bar	0.1	1
psi	1	1 (X10)

F Anti-chattering function

A large bore cylinder or ejector consumes a large amount of air in operation and may experience a temporary drop in the primary pressure. This function prevents detection of such temporary drops in primary pressure as abnormal pressure.

Response time selections: 20 ms, 160 ms, 640 ms, 1000 ms, 2000 ms

H Zero-cut off display function

With the ISE75 series, users can enable or disable a function (zero-cut off display function) that displays pressure values of 0.3 MPa or less as zero (0.4 MPa or less in the ISE75H series).

Example pressure displays (shading indicates changed displays)

ISE75-□ (for 10 MPa)

Zero-cut off display function "ON": 0 → **Displayed as 0** → 0.4 → 0.5 → 0.6 → → 9.9 → 10.0

Zero-cut off display function "OFF": 0 → 0.1 → 0.2 → 0.3 → 0.4 → 0.5 → 0.6 → → 9.9 → 10.0

ISE75H-□ (for 15 MPa)

Zero-cut off display function "ON": 0 → **Displayed as 0** → 0.5 → 0.6 → → 14.9 → 15.0

Zero-cut off display function "OFF": 0 → 0.1 → 0.2 → 0.3 → 0.4 → 0.5 → 0.6 → → 14.9 → 15.0

Pressure Display Range

Series	Zero-cut off display function "ON"	Zero-cut off display function "OFF"
ISE75	0, 0.4 to 10.0 MPa	0 to 10.0 MPa
ISE75H	0, 0.5 to 15.0 MPa	0 to 15.0 MPa

* The set pressure range does not change when the zero-cut off display function is disabled.

G Error function

Take the following corrective actions when error occurs.

Error description	LCD display	Description	Action
Over-current error	OUT1	Load current of switch output exceeds 80 mA.	Eliminate the cause of the over current by turning off the power supply, and then turn on it again.
	Note 1) OUT2		
Residual pressure error	Er3	During zero-clear operation, pressure over $\pm 7\%$ F.S. is applied. After 3 second, the mode will reset to measurement mode. $\pm 1\%$ F.S. of the zero-clear range varies between individual products.	Perform zero-clear operation again after restoring the applied pressure to an atmospheric pressure condition.
Applied pressure error	HHH	Supply pressure exceeds the maximum set pressure.	Reset applied pressure to a level within the set pressure range.
	LLL	Supply pressure is below the minimum set pressure.	
System error	Er4	Internal data error	Turn the power off and turn it on again.
	Er6	Internal data error	
	Er7	Internal data error	
	Er8	Internal data error	

* If the failure cannot be solved after the above instructions are performed, please contact SMC for investigation.

Note 1) Output -27 and -67 only.
