## 2-Color Display Digital Flow Switch

## PFM Series

Flow rate range: 10, 25, 50,100 L/min.

Minimum unit setting: $0.01 \mathrm{~L} / \mathrm{min}$.
( $0.1 \mathrm{~L} / \mathrm{min}$ when the flow rate range is $25,50,100 \mathrm{~L} / \mathrm{min}$.)

Repeatability: $\pm 1 \%$ F.S.
Grease-free
Flow adjustment valve is integrated. (Reduced piping and space saving)

Response time:
Either $50 \mathrm{~ms}, 0.5 \mathrm{~s}, 1 \mathrm{~s}$ or 2 s can be chosen.

## 2-color display

See abnormal values at a glance. swor
HRG MRG MGG BRG
4148

## 2-Golor Display Digitan Flow swfich

## Indicator function

Flashing speed varies according to flow rate. Color changes from green to red when rated flow rate is exceeded. Can be used as a simple monitor.

| Flashing speed | Flow rate |
| :---: | :---: |
| Fast | High |
| Slow | Low |

## Connectors <br> Con

Connection and removal of wiring is easy.

Support for vertical and horizontal secure mounting (panel mount)
A single panel opening is sufficient.
Reduces panel fitting labor and enables space-savings.

Panel opening

|  | Integrated type | Remote type |  |
| :---: | :---: | :---: | :---: |
|  |  |  |  |
| Measurement flow range |  |  |  |
| (L/min) |  |  |  |

## PFWN Eetles

Comparison with the current model PF2A711 (10 to $100 \mathrm{~L} / \mathrm{min}$ ) when ø6 One-touch fittings are attached.

## Piping Variations

## Main Functions

## Selection of fluid

Dry air, Nitrogen ( $\mathrm{N}_{2}$ ), Argon (Ar) or Carbon dioxide $\left(\mathrm{CO}_{2}\right)$ can be selected using the buttons.

## Secret code setting function

The user must input a secret code to cancel the keylock mode. This ensures that only authorized persons can operate the switch.

For details and other functions, refer to page 248.

## Power-saving mode

Turning off the display can save power consumption.

The decimal point indicators flash in power-saving mode.

| Selection of <br> indication unit | User can select between ANR and NL/min for each fluid. <br> $[\mathrm{ANR}] \quad$Indicates the flow rate converted to a volume under standard conditions: $20^{\circ} \mathrm{C}, 1 \mathrm{~atm}$ <br> (atmosphere), 65\%RH <br>  <br> $[\mathrm{NL} / \mathrm{min}]$ Indicates the flow rate converted to a volume under normal conditions: $0^{\circ} \mathrm{C}, 1 \mathrm{~atm}$ (atmosphere). |
| :--- | :--- |
| External input | Can be selected from accumulated value external reset, auto-shift and auto-shift zero. |
| Indication <br> resolution | Minimum unit setting can be selected from $1 \mathrm{~L} / \mathrm{min}, 0.1 \mathrm{~L} / \mathrm{min}$ and $0.01 \mathrm{~L} / \mathrm{min}$. Depends on the model. <br> Refer to the specifications (P. 216, 244) for details. |

## Several Combinations

Depending on the installation conditions, it is possible to add or remove the flow adjustment valve, change the fitting type and the piping direction as desired.

The accuracy may fluctuate by 2 to $3 \%$ just after replacement.
(Repeatability does not change.)

## Recommended Air Circuits

## Compressed air line

## Settable Range and Rated Flow Range

## Set the flow rate within the rated flow range.

The settable rate range is the range of flow rate that can be set in the switch.
The rated flow range is the range that satisfies the switch specifications (accuracy, linearity etc.).
It is possible to set a value outside of the rated flow range if it is within the settable range, however, the specification is not be guaranteed. The flow range if using $\mathrm{CO}_{2}$ is given in brackets.

In the case of the PFM5 series, the displayable and settable ranges are the same as the PFM3 series flow monitor.

## Detection Principle

This MEMS sensor chip consists of upstream temperature measuring sensor ( Ru ) and downstream temperature measuring sensor (Rd), which are placed symmetrically from the center of a platinum thin film coated heater ( Rh ) mounted on a membrane, and an ambient temperature sensor (Ra) for measuring gas temperature.
The principle is shown as the diagram on the right. (a) When the gas is static, the temperature distribution of heated gas centered around Rh is uniform, and Ru and Rd have the same resistance. (b) When the gas flows from the left side, it upsets the balance of the temperature distribution of heated gas, and the resistance of Rd becomes greater than that of Ru.
The difference in resistance between Ru and Rd is proportional to the flow velocity, so measurement and analysis of the resistance can show the flow direction and velocity of the gas. $R a$ is used to compensate the gas and/or ambient temperature.

(a) The gas is static.

Flow

(b) The gas flows from the left side.

## $\triangle$ Caution

(1) The accuracy could change by 2 to $3 \%$ when the piping is removed or replaced.
The repeatability accuracy is $\pm 1 \%$ F.S. when piping is replaced with piping of the same size. However, the accuracy could change by 2 to $3 \%$ if the size is different or when changing from straight to elbow or from elbow to straight piping.

| Enclosure |  | IP40 |  |  |  |
| Operating temperature range |  | Operating: 0 to $50^{\circ} \mathrm{C}$ Stored: -10 to $60^{\circ} \mathrm{C}$ (with no freezing and condensation) |  |  |  |
| Operating humidity range |  | Operating, Stored: 35 to 85\%R.H. (with no condensation) |  |  |  |
| Withstand voltage |  | 1000 VAC for 1 minute between terminals and housing |  |  |  |
| Insulation resistance |  | $50 \mathrm{M} \Omega$ or more (500 VDC measured via megohmmeter) between terminals and housing |  |  |  |
| Temperature characteristics |  | $\pm 0.5 \%$ F.S. ( $25^{\circ} \mathrm{C}$ reference) |  |  |  |
| Standards |  | CE UL, CSA RoHS |  |  |  |
| Connection |  | Power supply/Output connection: 5P connector, Sensor connection: 4P connector |  |  |  |
| Material |  | Front case, Rear case: PBT |  |  |  |
| Weight |  | 30 g (Without cable) 85 g (With cable) |  |  |  |

Note 1) Select the sensor to connect in the initial setting. If $\mathrm{CO}_{2}$ is selected as the operating fluid, the value is $1 / 2$ on the maximum side.
Note 2) When $10 \mathrm{~L} / \mathrm{min}$ with a minimum unit setting of $0.01 \mathrm{~L} / \mathrm{min}$ is selected for the connected sensor, the upper limit of the display range is $10.50 \mathrm{~L} / \mathrm{min}$. When $100 \mathrm{~L} / \mathrm{min}$ with a minimum unit setting of $0.1 \mathrm{~L} / \mathrm{min}$ is selected for the connected sensor, the upper limit of the display range is $105.0 \mathrm{~L} / \mathrm{min}$. The setting at the time of shipment is $10 \mathrm{~L} / \mathrm{min}$ with a minimum unit setting of $0.1 \mathrm{~L} / \mathrm{min}$ for the connected sensor.
Note 3) When equipped with a unit switching function. (The SI unit ( $L / \mathrm{min}$ or L ) is fixed for types with no unit switching function.)
Note 4) The accumulated flow value is cleared to 0 when power is turned off. It is possible to select function that holds the accumulated flow value so it is not cleared. (The accumulated flow value can be held at 2 - or 5 -minute intervals.) The service life of the memory element (electronic component) is limited to 1 million overwrite cycles (assuming 24 -hour operation, 5 minutes $\times 1$ million cycles $=5$ million minutes $=9.5$ years) when 5 -minute intervals are selected. Therefore, when using the holding function, calculate the service life based on the usage conditions, and use the switch within the service life. Applies to models equipped with a unit switching function. (The SI unit (L/min or L) is fixed for types with no unit switching function.)
Note 5) Set to hystresis mode at the time of shipment from the factory. Can be changed to window comparator mode using push-buttons.
Note 6) Accumulated external reset function at the time of shipment from the factory. Auto-shift or auto-shift zero function can be selected using push-buttons.
Note 7) For details about wiring and thread type, refer to the Operation Manual that can be downloaded from SMC website (http://www.smcworld.com).
Note 8) Any products with tiny scratches, smears, or display color variation or brightness which does not affect the performance are verified as conforming products.
Analog Output
Note: Analog output at maximum rated flow rate when $\mathrm{CO}_{2}$ is selected is $3[\mathrm{~V}]$ for the voltage output type and $12[\mathrm{~mA}]$ for the current output type.

## PFM Series

Function Details

## Output operation

The output operation can be selected from the following: Output (hysteresis mode and window comparator mode) corresponding to instantaneous flow rate,
Output corresponding to accumulated flow,
Accumulated output pulse output
At the time of shipment from the factory, it is set to hysteresis mode and normal output.

## Indication color

The indication color can be selected for each output condition. The selection of the indication color provides visual identification of abnormal values. (The indication color depends on OUT1 setting.)

## Selection of operating fluid

The fluid can be selected. If argon (Ar) or carbon dioxide $\left(\mathrm{CO}_{2}\right)$ is used, the setting needs to be changed.
Note) When $\mathrm{CO}_{2}$ is selected, the upper limit of the mea-

| Dry air, $\mathrm{N}_{2}$ |
| :---: |
| Argon |
| $\mathrm{CO}_{2}$ |

## Selection of indication unit reference

The indication unit reference can be selected between standard conditions and normal conditions.

Standard conditions: Flow rate converted to a volume at $20^{\circ} \mathrm{C}$ and 1atm (atmosphere)
Normal conditions: Flow rate converted to a volume at $0^{\circ} \mathrm{C}$ and 1atm (atmosphere)

## Setting of response time

The flow rate may change momentarily during transition between ON (open) and OFF (closed) of the valve. It can be set so that this momentary change is not detected.
<Principle>

When the switch has been in ON area for a set period of time, the output will turn on (or off).

## Indication mode

The indication mode can be selected between instantaneous flow rate and accumulated flow.

Instantaneous flow rate display Accumulated flow display

## External input function

The external input function can be selected from accumulated value external reset, auto-shift and auto-shift zero.
(Input signal: Connect input line to GND for 30 ms or more.)
External reset: This function resets the accumulated value to " 0 " when an input signal is applied.
Auto-shift: This function generates an output corresponding to the change in relation to instantaneous flow rate when an input signal is applied.
Auto-shift zero: This function displays instantaneous flow rate as " 0 " when a positive input signal is applied in the auto shift function described above.
Set values and flow rates that are relatively on the negative side are expressed by illumination of the decimal point on the far left.

## External input wiring example

PFM3 $\square 2 \quad$ PFM3 $\square 5$
NPN open collector output with extermal input: 2 outputs PNP open collector output with external input: 2 outputs

## Indication resolution

The indication resolution of the PFM710 and 711 series can be changed to enable values to be indicated in smaller steps.

| 100 resolution | PFM710 <br> PFM711 | by $0.1 \mathrm{~L} / \mathrm{min}$ <br> by $1 \mathrm{~L} / \mathrm{min}$ |
| :--- | :--- | :--- |
|  | PFM710 <br> PFM711 | by $0.01 \mathrm{~L} / \mathrm{min}$ <br> by $0.1 \mathrm{~L} / \mathrm{min}$ |

## Accumulated value hold

Accumulated value is not cleared even when the power supply is turned off.
The accumulated value is memorized every 2 or 5 min . during measurement, and continues from the last memorized value when the power supply is turned on again.
The life time of the memory element is 1 million access cycles. Take this into consideration before using this function.

## Selection of analog output filter

This selection is available when using a product with an analog output. A signal with fast response speed can be generated by turning off the analog output filter.

## ■ Selection of power-saving mode

The power-saving mode can be selected.
With this function, if no buttons are pressed for 30 sec., it shifts to power-saving mode.
At the time of shipment from the factory, the product is set to the normal mode (the power-saving mode is turned off).
(When power-saving mode is activated, the decimal point flashes.)

## Setting of secret code

The user can select whether a secret code must be entered to release key lock.
At the time of shipment from the factory, it is set such that the secret code is not required.

## Peak/Bottom value indication

The maximum (minimum) flow rate is detected and updated from when the power supply is turned on. In peak (bottom) value indication mode, this maximum (minimum) flow rate is displayed.

## Keylock function

Prevents operation errors such as accidentally changing setting values.

## Zero-clear function

Allows the user to adjust the measured flow rate indication to zero. The adjustment range is $\pm 10 \%$ F.S. of the initial factory setting.

## Error indication function

When an error or abnormality arises, the location and contents are displayed.

| Description | Contents | Action |
| :---: | :---: | :---: |
| Flow rate error | The flow rate exceeds the upper limit of indicated flow rate range. | Decrease the flow rate. |
|  | There is a reverse flow equivalent to $-5 \%$ or more. | Turn the flow to correct direction. |
| Overcurrent error | Load current of 80 mA or more is applied to the switch output (OUT1). | Eliminate the cause of the overcurrent by turning off the power supply and then turn on it again. |
|  | Load current of 80 mA or more is applied to the switch output (OUT2). |  |
| System error | Possibility of internal circuit damage before factory adjustment. | Stop operation immediately and contact SMC. |
|  | System error. Possibility of data memorizing failure or internal circuit damage. | Reset the unit, and carry out all settings again. |
| Zero-clear error | If zero-clear is performed (by holding down $\Delta$ and (0) buttons simultaneously for 1 sec .) while there is some flow, "Er4" will be displayed for 1 sec . | Perform zero-clear of accumulated flow rate when there is no flow. |
| Flow rate error | The flow rate exceeds the accumulated flow rate range. | Clear the accumulated flow rate. (This error does not matter when the accumulated flow rate is not being used.) |

If the failure cannot be solved after the above instructions are performed, please contact SMC for investigation.

## PFM7/PFM5 Series

Please contact SMC for detailed specifications, lead times and prices.

## 1 Changing the Piping Entry Direction Combination for IN and OUT Side

For details of How to Order, refer to pages 214 and 228.

Made to Order 3

Please contact SMC for detailed specifications, lead times and prices.

## 2 Compatibility with Argon (Ar) and Carbon Dioxide (CO2) Mixed Gas

The argon-carbon dioxide gas ratio ( $\mathrm{Ar}: \mathrm{CO}_{2}$ ) can be selected using the push-buttons from among the following: $92: 8,90: 10,80: 20,70: 30$, and $60: 40$. Dimensions are same as those of standard models.

For details of How to Order, refer to pages 214 and 228.

| Model | Gas ratio |  | Rated flow range | Displayable range | Settable range | Max. analog output |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Ar | $\mathrm{CO}_{2}$ |  |  |  | Voltage (Vmax) | Current (Imax) |
| PFM710 | 92\% | 8\% | 0.2 to $7.0 \mathrm{~L} / \mathrm{min}$ | 0.2 to $7.4 \mathrm{~L} / \mathrm{min}$ | 0 to $7.4 \mathrm{~L} / \mathrm{min}$ | 3.80 V | 15.2 mA |
|  | 90\% | 10\% |  |  |  |  |  |
|  | 80\% | 20\% |  |  |  |  |  |
|  | 70\% | 30\% |  |  |  |  |  |
|  | 60\% | 40\% |  |  |  |  |  |
| PFM725 | 92\% | 8\% | 0.5 to $25.0 \mathrm{~L} / \mathrm{min}$ | 0.5 to $26.3 \mathrm{~L} / \mathrm{min}$ | 0 to $26.3 \mathrm{~L} / \mathrm{min}$ | 5.00 V | 20.0 mA |
|  | 90\% | 10\% |  |  |  |  |  |
|  | 80\% | 20\% | 0.5 to $20.0 \mathrm{~L} / \mathrm{min}$ | 0.5 to $21.0 \mathrm{~L} / \mathrm{min}$ | 0 to $21.0 \mathrm{~L} / \mathrm{min}$ | 4.20 V | 16.8 mA |
|  | 70\% | 30\% |  |  |  |  |  |
|  | 60\% | 40\% |  |  |  |  |  |
| PFM750 | 92\% | 8\% | 1.0 to $50.0 \mathrm{~L} / \mathrm{min}$ | 1.0 to $52.5 \mathrm{~L} / \mathrm{min}$ | 0 to $52.5 \mathrm{~L} / \mathrm{min}$ | 5.00 V | 20.0 mA |
|  | 90\% | 10\% |  |  |  |  |  |
|  | 80\% | 20\% | 1.0 to $40.0 \mathrm{~L} / \mathrm{min}$ | 1.0 to $42.0 \mathrm{~L} / \mathrm{min}$ | 0 to $42.0 \mathrm{~L} / \mathrm{min}$ | 4.20 V | 16.8 mA |
|  | 70\% | 30\% |  |  |  |  |  |
|  | 60\% | 40\% |  |  |  |  |  |
| PFM711 | 92\% | 8\% | 2 to $100 \mathrm{~L} / \mathrm{min}$ | 2 to $105 \mathrm{~L} / \mathrm{min}$ | 0 to $105 \mathrm{~L} / \mathrm{min}$ | 5.00 V | 20.0 mA |
|  | 90\% | 10\% |  |  |  |  |  |
|  | 80\% | 20\% | 2 to $90 \mathrm{~L} / \mathrm{min}$ | 2 to $95 \mathrm{~L} / \mathrm{min}$ | 0 to $95 \mathrm{~L} / \mathrm{min}$ | 4.60 V | 18.4 mA |
|  | 70\% | 30\% | 2 to $80 \mathrm{~L} / \mathrm{min}$ | 2 to $84 \mathrm{~L} / \mathrm{min}$ | 0 to $84 \mathrm{~L} / \mathrm{min}$ | 4.20 V | 16.8 mA |
|  | 60\% | 40\% |  |  |  |  |  |

## Output characteristics using mixed gas

[^0]:    Note 1) When the minimum unit setting $0.01 \mathrm{~L} / \mathrm{min}$ is selected for $10 \mathrm{~L} / \mathrm{min}$ type, the indication upper limit will be [ $9.99 \mathrm{~L} / \mathrm{min}]$.
    When the minimum unit setting $0.1 \mathrm{~L} / \mathrm{min}$ is selected for $100 \mathrm{~L} / \mathrm{min}$ type, the indication upper limit will be $[99.9 \mathrm{~L} / \mathrm{min}$ ].
    Note 2) User can select between $0.01 \mathrm{~L} / \mathrm{min}$ and $0.1 \mathrm{~L} / \mathrm{min}$ for the PFM710, and between $0.1 \mathrm{~L} / \mathrm{min}$ and $1 \mathrm{~L} / \mathrm{min}$ for the PFM 711 respectively.
    If the indication unit is selected to "CFM", the minimum unit setting cannot be changed.
    At the time of shipment from the factory, the minimum unit setting is set to $0.1 \mathrm{~L} / \mathrm{min}$ for the PFM710 and $1 \mathrm{~L} / \mathrm{min}$ for the PFM711 respectively.
    Note 3) Set to "ANR" at the time of shipment from the factory.
    "ANR" is used for standard conditions: $20^{\circ} \mathrm{C}, 1 \mathrm{~atm}$ and $65 \%$ R.H.
    " $\mathrm{NL} / \mathrm{min}$ " is used for normal conditions: $0^{\circ} \mathrm{C}$ and 1 atm .
    When equipped with a unit switching function. (The SI unit ( $\mathrm{L} / \mathrm{min}$ or L ) is fixed for types with no unit switching function.)
    Note 4) Cleared when the power supply is turned off. Hold function can be selected. (Interval of 2 min or 5 min can be selected).
    If the 5 min interval is selected, the life of the memory element (electronic part) is limited to 1 million cycles. (If energized for 24 hours, life is calculated as $5 \mathrm{~min} \times 1$ million $=5$ million $\mathrm{min}=9.5$ years). Therefore, if using the hold function, calculate the memory life for your operating conditions, and use within this life.
    Note 5) Set to $1.5 \mathrm{~s}(90 \%)$, can be changed to 100 ms .
    Note 6) Set to hystresis mode at the time of shipment from the factory. Can be changed to window comparator mode using push-buttons.
    Note 7) For details about wiring and thread type, refer to the Operation Manual that can be downloaded from SMC website (http://www.smcworld.com).
    Note 8) Any products with tiny scratches, smears, or display color variation or brightness which does not affect the performance are verified as conforming products.

[^1]:    Note) Options are not assembled, but shipped together.
